For MECHANISM ADJUSTMENTS, refer to the "8 mm Video MECHANICAL ADJUSTMENT MANUAL III" (9-972-732-11).

SPECIFICATIONS

System

Video recording system

Rotary two-head helical scanning
FM system

Audio recording system

Standard: Rotary head, FM system
(2 channels)

PCM: PCM system (2 channels)

Colour system

DDR SECAM to PAL colour,
convertible

Usable cassettes

8 mm video format cassettes

Tape speed

SP: approx. 20.051 mm/sec.
LP: approx. 10.058 mm/sec.

Recording/playback time

SP: 1 hr 30 min.
LP: 3 hrs.
(with Sony P5-90 cassette)

Fast-forward/rewind time

Approx. 4 min. (with Sony P5-90
cassette)

Tuner section

Channel coverage

VHF channels E2 - E4, E5 - E12
UHF channels E21 - E69
Cable TV channels S01 - S03,
S1 - S20 and S21 - S41

Programming system

60 program-memories

PF output signal

UHF channels E30 to E39
(variable), 75 ohms, unbalanced
75 ohms, asymmetrical aerial
socket

Aerial input

PCM

Sampling frequency

31.25 kHz

Audio frequency

20 ~ 15 kHz

Dynamic range

More than 88 dB

Wow and flutter

Less than 0.005% RMS

Inputs and outputs

STEREO VIDEO CASSETTE DECK

SONY®

Microphone input	Minijack —60 dBs, for low impedance microphone
Headphone jack	Stereo minijack —26 dBs, 8 ohms
DC out for Camcorder CONTROL L 	7.5 V DC, 1.6 A
	Stereo mini-mini jack

Timer

Clock	Crystal lock
Timer indication	24-hour cycle
Timer setting	Only for recording 6 events/ 1 month max.

General

Power requirements	220 V AC, 50 Hz
Power consumption	24 W
Operating temperature	5°C to 40°C (41°F to 104°F)
Storage temperature	–20°C to +60°C (–4°F to +140°F)
Dimensions	Approx. 430 × 100 × 302 mm (w/h/d)
	Approx. 17 × 4 × 12 inch
Weight	Approx. 5.3 kg (11 lb ½ oz)

Accessories supplied

See page 12.

Remote Commander RMT-456

Remote control system

	Infrared control
Command mode	Selectable VTR 1, 2 or 3
Power requirements	3 V DC 2 size AA batteries (IEC designation R6)
Dimensions	Approx. 77.5 × 20 × 219 mm (w/h/d) Approx. 3 × ¾ × 8½ inches incl. projecting parts and controls
Weight	Approx. 170 g (2.2 oz) without batteries

Design and specifications subject to change without notice.

SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

1. Check the area of your repair for unsoldered or poorly-soldered connections. Check the entire board surface for solder splasher and bridges.
2. Check the interboard wiring to ensure that no wires are “pinched” or contact high-wattage resistors.
3. Look for unauthorized replacement parts, particularly transistors, that were installed during a previous repair. Point them out to the customer and recommend their replacement.
4. Look for parts which, though functioning, show obvious signs of deterioration. Point them out to the customer and recommend their replacement.
5. Check the B+ voltage to see it is at the values specified.

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK  OR DOTTED LINE WITH MARK  ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

SECTION 1

SERVICE NOTE

[SEMICONDUCTOR LOCATION]

In this service manual, the mounted locations of the semiconductors (IC, transistor, diodes) are indicated in red sa shown below. This enables to find the location on the board easily when servicing.

1-1. SERVICE MODE

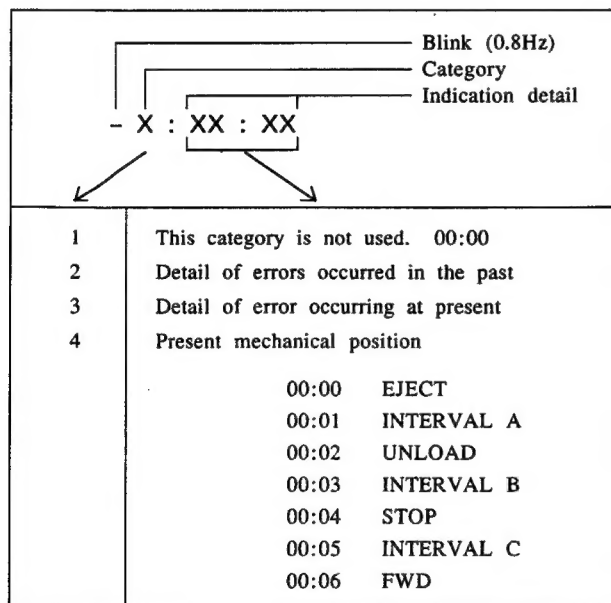

This equipment is provided with self-diagnostic function for the system control circuits. By selecting service mode, the state of error is indicated digitally on the FL indication tube. Use this function for service, failure analysis, etc.

1-1-1. How to select service mode

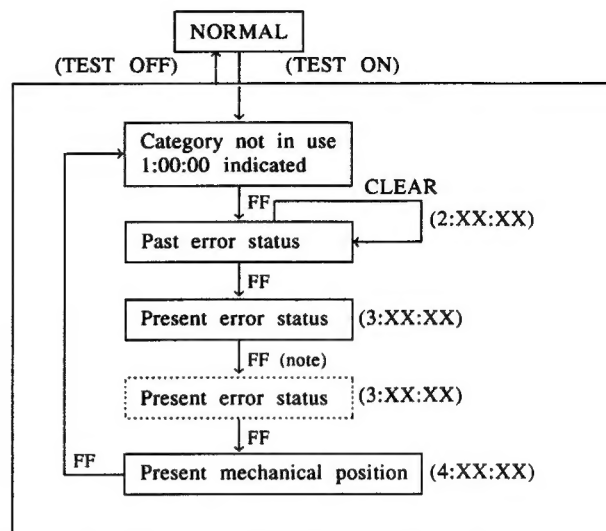

- 1) Remove the bottom plate of the unit.
- 2) Connect the TEST pin TP001 equipped on the pattern surface side of the ST-41 board, to GND. Thus, service mode is effected.
- 3) Every time the FF key (on the main unit or remote controller) is pressed, the category changes.
- 4) After completion of servicing, disconnect TP001 of board ST-41 out of the GND.

1-1-2. Indication methods

- Indication zones of the hour, minute and second counter in the FL indication tube are diverted.

1-1-3. Status transition diagram

Note: If there are several statuses of present errors, all are indicated.

Service mode error indication

Error state		PRESENT EMG.indication (-3:XX:XX)	LAST EMG.indication (-2:XX:XX)
No error		00:00	00:00
Loading motor		00:01	00:01
Reel error in unloading		00:02	00:02
Other REEL errors		00:03	00:03
Capstan error		00:04	00:04
FG error upon starting drum	(0)	00:05	00:05
	(1)	01:05	00:14
	(2)	02:05	00:15
No PG upon starting drum	(0)	00:06	00:06
	(1)	01:06	00:14
	(2)	02:06	00:15
FG error during normal drum operation	(0)	00:07	00:07
	(1)	01:07	00:14
	(2)	02:07	00:15
No PG during normal drum operation	(0)	00:08	00:08
	(1)	01:08	00:14
	(2)	02:08	00:15
Phase during normal drum operation	(0)	00:09	00:09

- (1) Loading
 (2) Upon unloading
 (3) Others

1-2. HOW TO REMOVE CASSETTE WHEN FAILED WITH CASSETTE STILL IN

- ① If the tape cannot be taken out while being wrapped onto the drum, remove the CM-13 board from the lower side of the mechanical unit, rotate the capstan motor wheel in any direction to turn the reel in the S or T side and house the tape. After completion of housing, operate ②.
- ② When the tape is housed in the cassette half and cannot be taken out:
 - 1) Remove the front panel and remove the assy of the L frame and driving arm (L) equipped in the left side of the cassette control unit, in the direction of the arrow **A**.
 - 2) Rotate the junction gears in the direction of the arrow **B** with your both thumbs.

1-3. REPLACING of OUTER FITTINGS

1-4. REPLACING of CASSETTE DOOR ASSY

- 1) Remove the front panel.
- 2) First remove Part **A** towards you and then remove Part **B**.
- 3) For mounting, first engage the lug of Part **C** and then Part **B**. Mount Part **A** so that the door can hang substantially vertically.

1-5. HOW TO CLEAN VIDEO HEAD AND RUNNING SYSTEM

Method 1 Cleaning with cleaning tape

- Use the cleaning cassette V8-25CLH. (Before using it, be careful to read the manual attached to the cleaning cassette.)

Method 2 Cleaning with cleaning liquid

- ① Remove the upper case of the video deck.
- ② Coat the cleaning liquid onto the head cleaner stick (Ref No. 3-601-330-99).
- ③ Referring to the right, clean the video head by lightly attaching the head cleaner stick while slowly rotating the rubber part of the upper rotation drum.

(Cleaning of running system)

- ① Coat the cleaning liquid onto the head cleaner stick.
- ② Clean each guide and pinch roller coming in direct contact with the tape, using the head cleaner.

1-6. REPLACING of UPPER ROTATION DRUM

Method 3 Precautions

- Be extremely careful to handling the video head and the terminal.
- Referring to Fig. 1, don't touch the side surface (Part A) directly with your finger tips but hold the upper part (Part B) to take the upper rotation drum.

Removing of upper rotation drum

- ① Referring to Fig. 2, remove 2 short screws (2 × 4).
- ② Referring to Fig. 2, completely remove the soldering at 8 places on the board of the upper rotation drum.

- ③ Referring to Fig. 3, fix the repairing jig (packed in the upper rotation drum) using 2 short screws attached to the jig and screw in the attached long screw rod. Thereby, the upper rotation drum is removed.

Mounting of new upper rotation drum

- ① Referring to Fig. 4, clean the flange surface and the bottom surface of the new upper rotation drum.
- ② Referring to Fig. 4, insert the shaft attached to the jig into the positioning hole of the lower drum, insert the shaft into the positioning hole of the new upper rotation drum and softly set the upper rotation drum.

- ③ Lightly push the upper rotation drum manually with the shaft still inserted in the positioning hole. However, if it cannot be inserted completely, alternately tighten 2 long screws (2 × 5) referring to Fig. 5 to fix the upper rotation drum.
- ④ Remove the shaft already inserted before. If removing of the shaft is sluggish at that time, repeat operations from ②.

- ⑤ Referring to Fig. 2, solder 8 places on the board of the upper rotation drum and 8 terminals.
- ⑥ After completion of replacing the upper rotation drum, clean the video head and the running system using the head cleaner stick referring to "Method 2 Cleaning of Video Head and Running System."

SECTION 2 GENERAL

This section is extracted from
instruction manual.

EV-S550E

Features

- **PCM audio recording system**
This feature allows you to take advantage of the latest technology in high-grade audio systems.
- **Hi-Fi stereo recording and playback**
You can enjoy dynamic Hi-Fi stereo sound by connecting your audio system to this VTR.
- **EDIT SHUTTLE for easy editing**
You can search for a desired editing point quickly by turning the EDIT SHUTTLE control clockwise or counterclockwise.
- **Useful tape counter**
The tape counter clearly indicates the number of hours, minutes and seconds that have elapsed during recording or playback operations.
- **Easy editing with a Sony 8mm Camcorder**
The LINE IN AUDIO/VIDEO and DC OUT jacks on the front panel allow for easy connection of the Sony 8mm Camcorder. The DC OUT (7.5V, 1.6A) jack supplies power for the camcorder so that it can easily be used to perform editing.
- **CONTROL L & (LANC) jack**
When using this jack to connect another video peripheral such as a VTR, tape transportation for the other peripheral can easily be controlled on this unit. Furthermore, you can control both devices simultaneously for a bilateral synchronized editing.
- **REC LEVEL control for audio dubbing**
This control knob is used to adjust the audio level for each scene when audio dubbing.
- **Remote Commander with LCD**
You can preset this VTR to show or record programs (timer setting) automatically using the Remote Commander with LCD. Almost all operations can be done by using this device.
- **Six event timer**
Each month up to six preselected programs can be set for recording with this timer.

This unit uses 8mm video format cassettes.

It records in the SP mode (approximately 20.051 mm/second) and the LP mode (approximately 10.058 mm/second) and can play back in the SP mode and the LP mode.

This unit is equipped with PCM (digital audio) recording/playback functions.

Cassette Care

To prevent Accidental Erasure

Slide out the tab on the cassette so that the red colour appears.

To re-record on the cassette, slide the tab back.

Tape Speed

The LP mode is twice as long as the SP mode. For better picture, recording in the SP mode is recommended. During playback, the mode in which the tape was recorded is selected automatically.

Cassette used	Tape speed	
	SP	LP
P5-15MP	15 min.	30 min.
P5-30MP	30 min.	1 hour
P5-60MP	60 min.	2 hours
P5-90MP	90 min.	3 hours

Notes

- Always insert the cassette in the correct direction.
- Never insert anything in the small holes on the rear of the cassette.
- Store cassettes in their cases and keep them in an upright position to prevent intrusion of dust and uneven winding.
- To record from the beginning of the tape, run the video camera recorder for about 15 seconds at the beginning of a cassette before recording. It will avoid missing the starting point during playback on a video cassette recorder.
- When the VTR is not in use, remove the cassette.

Preparing the Remote Commander

Battery Insertion

- 1 Slide and remove the cover.
- 2 Insert two R6 (size AA) batteries with the correct polarity.
- 3 Close the cover.
The clock on the Remote Commander will read "----:--".
Set the date and clock referring to "Setting the Clock".

Setting the Remote Commander to control your VTR

This Remote Commander can be used to control three different types of Sony VTRs. The Remote Commander identifies each VTR by its command mode setting.

Setting the command mode on this VTR

- 1 Set the COMMAND MODE selector on the rear panel of the VTR to the desired position, VTR1, VTR2 or VTR3. Set normally to VTR2.
- 2 Press the COMMAND MODE button on the Remote Commander to display the same position, which has been set on the VTR, in the LCD. Then the VTR can be operated with the Remote Commander.

Remotely controlling other Sony VTRs

- Controlling another VTR equipped with the command mode selector
Set different command modes for this VTR (VTR2, for instance) and the other VTR (VTR1). Select the identical command mode set on each VTR on the Remote Commander. For instance, select VTR1 on the Remote Commander to control the other VTR and VTR2 to control this VTR.
- Controlling another VTR without a command mode selector
Change the setting on the Remote Commander according to each type of VTR as follows:
VTR1: Sony Betamax VTRs
VTR2: Sony 8mm VTRs (this VTR)
VTR3: Sony Hi8 VTRs

Note on batteries

- On battery life
Under normal operation, batteries will last for about 3 months. When the batteries are exhausted, the remote function will not be operated when the buttons on the Remote Commander are pressed. Replace all the batteries with new ones.
- Insert batteries correctly according to their polarities.
- Do not use a new battery and an old one together. Batteries of different types also should not be used simultaneously.
- If the Remote Commander is not to be used for a long time, remove the batteries to avoid possible damage from battery leakage.

Setting the Clock

Set the date and time (clock) on the Remote Commander. Then transmit it to the VTR.

The time and date between the years 1990 and 2005 can be set.

Operation

Example: To set to 9:30, Thursday, July 4, 1991.

- 1 Open the cover and press the CLOCK SET button.
- 2 Press the D+ (day) button until "7 M 91 Y" is displayed.
The day will be advanced slowly up to 30 (31) days ahead and then the month will be advanced. When the number of the desired month has appeared, release your finger from the button.
- 3 Press the + side or - side of the D (day) button until 4 D is displayed.
The day of the week appears automatically.
- 4 Press the H (hour) and M (minute) buttons under ③ TURN OFF to set to 9:30.
- 5 Point the Remote Commander at the VTR and press TRANSMIT.
A beep sound confirms that the date and clock setting is registered in the VTR as well.
The clock on the VTR will start counting and displaying the seconds in the LCD.
- 6 Check the display window on the unit and close the cover.

When "0:00" is blinking on the unit

If the power is interrupted for more than one hour, "0:00" will blink in the display when the power is restored. You will have to reset the date and clock again.

When a short beep sounds repeatedly

The VTR is in the timer recording or quick timer recording mode and the setting cannot be transmitted.

When the batteries are replaced

Reset the clock correctly.

When the clock on the Remote Commander is correct but the one on the unit is incorrect

- Open the upper cover of the Remote Commander and press the CLOCK SET button.
The correct time is displayed in LCD.
- Point the Remote Commander to the unit and press the TRANSMIT button.
The present time is correctly transmitted in hours, minutes and seconds.

EDIT STANDBY button and indicator ③

SYNCHRO EDIT button and indicator ④

EDIT SHUTTLE control and indicator ⑤

RECORDER button and indicator ⑥

PLAYER button and indicator ⑦

CL (reset) button

If the VTR does not operate even when pressing the operating button, press this button with a pointed object such as a ball point pen. When this button is pressed, all of the information stored in the VTR memory is cleared.

SHARPNESS control ⑧

Adjust the sharpness of the picture if necessary. Normally set this at the center detent position.

SLOW/STILL ADJ (adjustment) buttons ⑨

Adjust the still or slow-monitor picture if necessary.

SET button ⑩

NORMAL/CATV button ⑪

TUNING +/- buttons ⑫

CLEAR button ⑬

EDIT button ⑭

When editing a tape, press this button so that the EDIT indication lights in the display window.

AUDIO DUB button ⑮

Press to record on the PCM track of any recorded video cassette tape.

● REC (recording) button

Supplied accessories

Remote Commander
RMT-456 (1)

Audio connecting cord (1)
(phono 2 ↔ phono 2)

Video connecting cord (1)
(phono 1 ↔ phono 1)

Size AA (R6) batteries (2)

LANC cable (1)

75 ohm coaxial cable for TV (1)

DC in cord (1)

Screwdriver (1)

Front panel

AUDIO LINE IN (STEREO/BILINGUAL) button ①
Use this button when editing the bilingual broadcast recorded tape from another VTR.

REC MODE SP/LP (recording mode) button
This selects the recording speed, SP or LP. The recording time of any given cassette in the LP mode is 2 times that in the SP mode. The playback speed is automatically set regardless of the setting of this selector.

INPUT SELECT button
Press to display the desired input signal indication in the window.

TUNER: To record TV programs

LINE: To record video/audio signals from the LINE IN 1 or 2 VIDEO/AUDIO jacks or to dub only audio signals from LINE IN AUDIO or MIC jack.

REC LEVEL controls ②
Use to adjust the recording level.

When dubbing the audio signals, use to adjust the input level from the LINE IN AUDIO.

PHONES jack (stereo minijack) and LEVEL control
Connect stereo headphones. The volume can be adjusted with the LEVEL control.

MIC (microphone) jack (minijack) ③
To record from this jack, display "LINE" and "L1" or "L2" by pressing the INPUT SELECT button.

CONTROL L (LANC) jack (stereo mini-minijack)

LANC switch ④

M: Controls other peripherals or VTR with this VTR.

S: Controls this VTR with other peripherals or VTR.

About the ④

④ means the LANC connector. LANC stands for Local Application Control Bus System. The LANC connector is used for controlling the tape transport of video equipment and peripherals connected to it. This connector has the same function as the connectors indicated as CONTROL L or REMOTE.

ANT TV/VTR button

Press to view the program selected on the recorder. The VTR indicator appears in the display window (VTR mode). To view a TV program while recording another, press this button again. The VTR indicator disappears (TV mode).

COUNTER RESET button ⑤
Press to reset the tape counter to zero.

TIMER CHECK button ⑥
Press to check the contents of the timer presettings.

TIMER REC ON/OFF button ⑦

QUICK TIMER button ⑧

VPS (Video Program System) switch ⑨
Set to ON activate the VPS in the timer recording.

LINE IN (Input) 2 VIDEO/AUDIO jacks (phono jack)

DC OUT FOR CAMCORDER ⑩
Use supplied DC cable for COMCORDER connection.

AUDIO MONITOR selector ⑪

During playback or recording, set to the appropriate position to monitor the desired sound.

PCM: To play back the sound on the PCM track.

When nothing is recorded on the PCM track, the recorded sound on the standard track is played back regardless of the position of this selector.

MIX: to play back the sound on the PCM and standard tracks simultaneously.

STD: to play back the sound on the standard track.

Rear panel

x2 SOUND switch ⑫
To hear the sound in double speed playback, set the x2 SOUND switch on the VTR to ON. The sound is also played back in double speed. If the sound is unnecessary, set the switch to OFF.

COMMAND MODE selector ⑬
When operating this VTR with the Remote Commander, select the same position as this on the Remote Commander.

AC power cord

COLOUR SYSTEM switch

Normally set to AUTO.

According to the TV program, colour system will be switched automatically to PAL or DDR SECAM. If the signal is too weak or the picture is distorted, set the switch to PAL. DDR SECAM programs will be displayed in black and white.

AUTO STEREO switch ⑭

Normally set it to ON.

ON: Automatically set to stereo or monaural broadcast.

OFF: Always in monaural mode even if being set to stereo broadcast.

LINE IN (Input) 1 VIDEO/AUDIO jacks (phono jack)
Connect to the video and audio outputs of a TV, VTR, CD player, etc.

AERIAL OUT socket
Connect the aerial input of the TV receiver.

AERIAL IN socket
Connect the aerial cable.

LOCAL/DX switch ⑮
Normally set to DX. If the TV signal is very strong, set the switch to LOCAL.

RF CHANNEL screw ⑯
If there is interference on the factory-preset channel for RF output and the output signal from this unit cannot be displayed clearly on the TV screen, adjust the screw with the supplied screwdriver.

LINE OUT (output) VIDEO/AUDIO jacks (phono jack)
Connect to the video and audio inputs of a TV, VTR, amplifier, etc.

EURO-AV connector (21-pin) ⑰

Connect to the 21-pin connector of a VTR or a TV/monitor, or to the audio/video input of these units with an appropriate connecting cable.

Remote Commander RMT-456

Almost all operations can be done with this Remote Commander.

Buttons on this Remote Commander have the same functions as those on the VTR.

- Operate the Remote Commander keeping the upper cover closed except when adjusting the Clock Setting or Timer Setting.
- INPUT SELECT button and REC MODE select button

When the upper cover is closed, these are used for setting the input select and the recording mode at present respectively.

When opened, the input select and the recording mode to be preset are selected respectively by these buttons.

Remote Commander Precautions

Do not let sunlight or light from a powerful artificial light source fall directly on the Remote Commander sensor on the front panel as it may interfere with operations or damage the sensor.

Playback

Playback can be controlled with the identically marked buttons on both the unit and the Remote Commander. For details on connecting, see page 42.

Playing a Tape

- 1 Insert the cassette slowly into the unit. The power turns on automatically.
- 2 Turn on the TV and select the program, or select the input for the VTR.
- 3 Press the ▷ PLAY button. ▷ appears in the display window and playback starts.

Caution

Beware that children do not insert their fingers into the cassette compartment. Doing this may cause injury.

To stop playback

Press ■.

To rewind the tape

Press ◀◀ ◀◀ appears in the display window on the unit.

To advance the tape rapidly

Press ▶▶ ▶▶ appears in the display window on the unit.

To eject the cassette

Press EJECT on the unit. Pressing the EJECT button when the VTR is turned off will turn the unit on, eject the cassette, and then turn it off again.

EJECT does not function during recording or recording pause mode.

Note

When the end of the tape is reached during playback, the VTR automatically rewinds the cassette.

Picture adjustment

Turn the SHARPNESS control toward SOFT or SHARP. Normally set to the center of the control.

Playing back a tape from the beginning after rewinding - Auto Play

While pressing the ◀◀ REW button, press the ▷ PLAY button. The "AUTO" indication will be displayed in the display window on the unit.

To index through a tape

Press the COUNTER RESET button at the beginning of a tape to set the counter to "0H00M00S". A convenient way to search a desired scene later is to make a note of the counter reading at that point. (Refer to page 20.)

When a blank tape is played back,

The picture will not appear and the tape counter will not function.

Dubbed Tape Playback

- Enlarged diagram of tape
 ● Standard track — Original sound
 ● PCM track — Dubbed sound

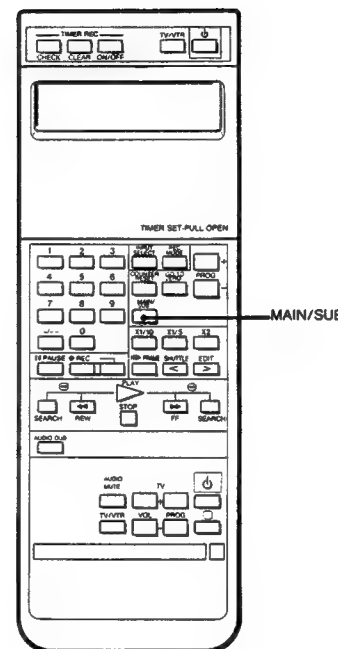

Sound to be played back	Position of AUDIO MONITOR selector
Dubbed sound	PCM
Original sound	STD
Both sounds mixed	MIX

When no sound during playback or the PCM indicator blinks:
 When a tape which has been recorded on a video camera recorder or a VTR without the PCM function is played back on this unit, the sound may not be heard or be heard only intermittently.
 In such a case, select STD on the AUDIO MONITOR switch. The PCM indicator may keep blinking but it will not affect the sound.

When a TV without VIDEO/AUDIO input is connected:
 To monitor the playback sound in stereo mode, connect a stereo system additionally.

When no recording is on the PCM track:
 If the AUDIO MONITOR switch is selected to PCM or MIX, the standard track will be played automatically.

Selecting the Playback Sound of a Stereo/Bilingual Tape

Choose the desired sound to be played back with the MAIN/SUB button on the Commander.

Type of tape	MAIN/SUB button and indicator
Stereo	Each press changes the playback sound to: <div> STEREO (stereo sound) ↓ L (left channel) ↓ R (right channel) </div>
Bilingual	Each press changes the playback sound to: <div> MAIN/ (main sound) ↓ SUB/ (sub sound) ↓ MAIN/SUB/ (main/left channel and sub/right channel) </div>

Playing back in Various Modes

Still picture

Press the **II/PAUSE/STILL** button on the unit or **II PAUSE** button on the Commander during playback. The **II** will appear in the display window. To resume normal playback, press the **> PLAY** button, or the **II/PAUSE/STILL** button or **II PAUSE** button on the Commander again.

When the pause mode lasts for more than approximately 7 minutes, it will be automatically released and the VTR will resume the playback mode.

Locked picture search (Commander only)

Press the **SEARCH** **⏮** or **⏭** button during playback or in still picture mode. To resume normal playback, press the **> PLAY** button.

Picture search

Keep pressing the **⏮ REW** or **⏭ FF** button during playback or in still picture mode. Release the button for normal playback.

FR picture search

Press **⏭** during fast-forward or **⏮** during rewind mode. The fast-forward or rewind mode picture can be viewed while the button is pressed.

Using the EDIT SHUTTLE (Main unit only)

Various playback modes can be selected by holding the **EDIT SHUTTLE** in the position illustrated. Turn it clockwise for forward direction and counterclockwise for reverse direction. Releasing it will place the picture in the pause/still mode. To resume normal playback, press **II** or **>**.

Using the SHUTTLE EDIT (Commander only)

Rewind playback (**<**) or normal playback (**>**) can be done by holding down the **<** or **>** button on the Commander in still picture mode. Releasing it returns the VTR to still picture mode.

Double speed playback (Commander only)

To view the double speed playback picture, press the **x2** button during playback or still picture mode. If the **x2 SOUND** switch on the rear panel of the unit is set to **ON**, the sound is also played in double speed. If **OFF**, no sound is heard.

To resume normal playback, press the **> PLAY** button.

Slow speed playback (Commander only)

Press the **x1/10** or **x1/5** button during playback or in still picture mode.

To resume normal playback, press the **> PLAY** button.

Frame-by-frame playback (Commander only)

Press the **II FRAME** button in still picture mode.

To resume normal playback, press the **> PLAY** button.

If the picture shakes during double speed playback or still picture:

Press the **SLOW/STILL ADJ** buttons to adjust to the least shaking point.

If noise bars appear on the screen during slow

playback:

Press the **SLOW/STILL ADJ** buttons to squeeze them out. Adjust this for each playback speed (**SP/LP**).

Notes

- Noise bars will appear and the sound will be muted in the high-speed playback mode.
- Horizontal bars appear at the top and bottom on the screen and sounds are not heard during **-x1** playback.
- When a cassette recorded in **SP** mode is played back in still picture or picture search mode, the picture may appear in black and white or shake depending on the TV being used.
- When a cassette is recorded in **SP** mode, noise bars will be wider than those on **LP**-recorded cassettes.

Using the Tape Counter

The COUNTER RESET buttons on the unit and on the Remote Commander have the same function. Press the COUNTER RESET button at the beginning of the tape so that the counter shows "0H00M00S". By noting the counter reading at a particular point, you can easily find that point later by referring to the tape counter.

To locate a particular point on the tape (auto play)

- 1 During playback or recording, press the COUNTER RESET button at the point to be located later. The counter is reset to "0H00M00S".
- 2 When playback or recording is finished, press the STOP button to stop the tape.
- 3 Press the GO TO ZERO and PLAY buttons. The "AUTO" indication will be displayed. The tape is rewound or advanced to the approximate "0H00M00S" point and played back automatically.

Notes

- When only the GO TO ZERO button is pressed, the tape will stop at the approximate "0H00M00S" point (tape return).
- The GO TO ZERO functions only when the counter reading is beyond ± 1 minutes.
- The counter reading and the point of the tape may not correspond exactly. Use the counter as a guide.
- The counter does not operate for a blank, unrecorded portion of a tape.
- There will be a time lag of several seconds on the counter reading after repeated fast-forward and rewind operations.
- There will be also a time lag of several seconds when the tape recorded in LP and SP modes mixed or the tape having a blank portion between the recorded portions is played back.

Recording a TV Program

Before recording

- Turn on the TV and select the channel for the unit or select the input for the VTR*.
- Press the INPUT SELECT button so that the TUNER indication appears.
- Set the AUTO STEREO switch to ON.

* If your TV/monitor is equipped with video/audio inputs, select the correct input on your TV/monitor.

Operation

- 1 Insert a cassette. The VTR will be turn on.
- 2 To select the recording mode, SP or LP. Press the REC MODE button.
- 3 Select VTR on the TV/VTR button when the VTR is connected to TV without video/audio input jacks. (VTR connection is made via the AERIAL OUT socket.) The "VTR" indication will be displayed.
- 4 Select the program position to be recorded.
- 5 Start recording by pressing the REC button(s). To do this on the Commander, press both REC buttons simultaneously.

To stop recording

Press the STOP button.

To stop recording for a moment:

Press the PAUSE/STILL or PAUSE button on the Commander.

To resume recording, press the button once again. (To protect the tape and video heads, the pause mode is cancelled after about 7 minutes and the unit will enter the stop mode automatically.)

When the end of the tape is reached by recording, the VTR automatically rewind the tape to the beginning and enters the stop mode. The power remains on.

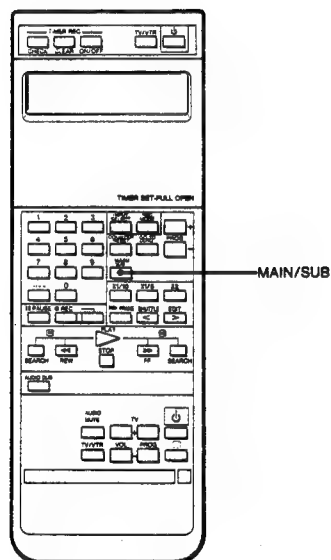

If the tape is ejected when the REC button(s) are pressed

The tab on the cassette is slid out. Slide the tab in, or use a new cassette.

Viewing One TV Program While Recording Another

Press the TV/VTR button so that the VTR indication disappears. Select the channel you want to view on the TV.

If your TV is equipped with a TV/VTR INPUT selector, simply select TV and then the desired channel on the TV.

Recording Stereo or Bilingual

This VTR receives and records stereo/bilingual programs based on the "Zweiton" system adopted in West Germany. To receive "Zweiton" broadcasts, select AUTO STEREO switch to ON.

When receiving a stereo program

The "STEREO" indication will be displayed in the display window.

The MAIN/SUB button does not function for the stereo program of the Zweiton system.

When recording bilingual program

The "MAIN/" indication will be displayed in the display window.

If desired, it is possible to select the monitor sound. Press the MAIN/SUB button repeatedly until the desired sound is heard. The sound is selected cyclically in the following order.

Display	Sound to be heard
MAIN/	Main sound
SUB/	Sub sound
MAIN/ SUB/	Main sound on the left channel and sub sound on the right channel

Recording is made as follows:

A stereo or bilingual program will be recorded on the standard track (Hi-Fi stereo) and PCM track as listed below, regardless of the sound being monitored.

Track	Sound to be recorded	
	Stereo	Bilingual
PCM and Standard (Hi-Fi)	Left channel	Main
	Right channel	Sub

If the received stereo signals are noisy

Set the AUTO STEREO switch to OFF.
The sound will be monaural.

① Standard track

② PCM track

Adjusting the Recording Level

- Recording from the tuner on the unit
To obtain the best recorded sound, set the REC LEVEL controls at 5 position.
- Recording from an external sound source
Adjust the level on the REC LEVEL controls according to the source.
- Appropriate recording level
Medium or lower frequency signals from a source (e.g. vocal)
Adjust so that the element at the 0 dB level lights at the highest signal level.
Medium or higher frequency signals from a source (e.g. trumpet, treble sound of violin)
Adjust so that the element at the -1 to -3 dB level lights at the highest signal level.

Cutting Out a Scene by Recording Over It

Overview

Using the recording pause mode, you can stop recording when an unwanted scene appears and then resume recording smoothly.

To easily reach an unwanted scene by rewinding and/or advancing the tape, use the SHUTTLE EDIT buttons on the Commander or the EDIT SHUTTLE on the unit. The unit will then enter the recording pause mode and allow you to resume recording smoothly.

Operation

- 1 While recording TV broadcast, press **PAUSE** on the Commander or **PAUSE/STILL** on the unit. The unit will enter the recording pause mode.

- 2 Rewind the tape with the **SHUTTLE EDIT </>** buttons on the Commander or the **EDIT SHUTTLE** control on the unit to locate the point to resume recording.

Using the EDIT SHUTTLE

Turn counterclockwise to search in reverse. Turn clockwise to search in forward. The playback speed is as indicated in the illustration.

Using the SHUTTLE EDIT </>

Press **<** to reverse the picture ($\times 1$ speed). Press **>** to advance the picture ($\times 1$ speed).

- 3 Release the **SHUTTLE EDIT** button or the **EDIT SHUTTLE** control at the desired point. The unit enters the recording pause mode after approximately 2 seconds.

- 4 Press the **PAUSE** button on the Commander or the **PAUSE/STILL** button on the unit when you wish to resume recording.

Note

To protect the tape and video heads, the pause mode will be automatically released after about 7 minutes and the unit will enter the stop mode.

PCM Audio Recording

Only the audio signals are recorded on the PCM track.

Normally adjust the REC LEVEL control to 5 position. To record both the video and audio signals, connect the video equipment to the LINE IN VIDEO jack. Then audio signals from the audio system are recorded on PCM track and video signals via LINE IN VIDEO are recorded on the standard track.

For details on connecting, see page 44.

- 1 Set the **AUDIO MONITOR** selector to PCM.
- 2 Press the **INPUT SELECT** button. The "L1" indication will appear in the display window.

Note

When a digital audio processor that does not conform to the 8mm format standard is used, select the SP mode and press the EDIT button so that the "EDIT" indication lights.

Timer-Activated Recording

Set the program on the Commander, then transmit it to the unit.

The timer can be set to record up to six timer setting programs on certain days or every day within one month. Presetting can be done even if power is turned off or the VTR is in recording pause mode.

Su	Mo	Tu	We	Th	Fr	Sa
		1	2	3	4	5
6	7	8	9	10	11	12
13	14	15	16	17	18	19
20	21	22	23	24	25	26
27	28	29	30	1	2	3
4	5	6	7	8	9	10
11	12	13	14	15	16	17
18	19	20				

Before timer setting

- Check that the clock on the unit is correct and that it corresponds to the clock on the Commander.
- For setting instructions, see page 7.
- Make sure the cassette is long enough to record all of the programs.
- Be sure the safety tab of the cassette has not been slid out.
- Press the INPUT SELECT button so that the TUNER indication appears.

Setting the Timer

Example: To record a program broadcast from 10:00 to 10:50 on Thursday, July 4, 1991 on program position 8 in LP mode.

- Open the cover of the Commander and press D until 4 appears. The day of the week, Th (Thursday) is automatically set.
- Set the hour to start recording with 2 TURN ON H.
- Set the minute to start recording with 2 TURN ON M.
- Set the hour and minute to end recording with 3 TURN OFF H and M.
- Set the recording mode, SP or LP, with the REC MODE button.
- Select the desired program position with PROG button. The "TRANSMIT" indicator blinks to indicate that all of the items are entered.
- Point the Commander to the VTR and press TRANSMIT. Transmitting should be done within five minutes. The VTR produces beep sound and enters the recording standby mode.
- Close the cover of the Commander so that the present time appears on the LCD display. The VTR turns itself on and starts recording at the selected time, then turns off after the recording ends.

To set another program
Repeat steps 1 to 7 before 8.

To record from the equipment connected to LINE IN VIDEO/AUDIO 1 or 2 jacks
Press INPUT SELECT in step 6 on the previous page to change the indication from PROG to LINE, L1 or L2. Then select as connected.

Making Daily/Weekly Recording

This VTR can be preset to record the same program each day of the week (daily recording) or the same program on a specific day of the week.

Instead of step 1 under "Setting the Timer", press D - on the Commander to change the LCD in the order shown in the illustration. When the desired recording mode is set and transmitted to the VTR, the corresponding indicator lights in the display window.

Notes

- Active buttons during timer-activated recording
 - TIMER CHECK button
 - COUNTER RESET button
 - TV/VTR button (Viewing another program during recording one program is possible.)
- After a preset recording is over, the numbers of presettings are moved up in turn.

Indication in the Display Window on the Unit

A few second after the transmitting, press the TIMER CHECK button then indication will appear as shown in the illustration.

- A Rec mode SP/LP (Tape speed)
- B A day of the week
- C Starting time
- D Channel to be recorded
- E Ending time
- F TIMER REC indication (Turns on when timer setting program is set. Shown during the power turns off.)
- G Program order number (8 timer settings available)

When the Timer Settings Overlap

If the settings for two programs overlap
The recording of program 2 will begin before the program 1 is finished.
In the illust.: (The coloured portion will not be recorded.)

If the turn-on time of two programs are the same
The recording of the program having the lower program number (ex. program 1) will be made. The memory of the program having the higher number will be cleared.
In the illust.: (The coloured portion will not be recorded.)

To record using the entire tape
Skip the turn-off time setting or set it to a time after the tape will reach the end.

Note
If the starting time of the former setting and the ending time of the latter setting are the same, about twenty seconds of the last portion of the former will be missing.

Caution
If a short beep occurs when TRANSMIT is pressed A short beep indicates that the transmission was not received by the VTR. Press TRANSMIT again before closing the cover, then check the items below.

- An illogical setting has been made.
- Timer setting can only be performed when the VTR is turned off, or in the stop, or timer recording mode.
- Six timer settings have already been made.
- The tape is at its end.
- The clock on the unit does not correspond to the one on the Commander.

When the cassette is ejected by pressing the TRANSMIT button or the TIMER REC ON/OFF button

- The opening on the cassette rear is red (closed). Slide the tab in to open, or insert a new cassette.

When the TIMER REC ON/OFF button is pressed "TIMER REC" does not appear the display window on the unit

- The cassette for recording is not inserted.
- The cassette is at its end.
- The timer setting is not set on the unit.

If a power interruption occurs

Recording will stop and power will turn off.
If the power interruption lasted for about 1 hour or less and recording time remains, recording will resume after the power comes back on.

Checking the Timer Setting

Press the TIMER REC CHECK button one time after another to display set programs in order.

Changing a Preset Timer Setting

- 1 Press the TIMER REC ON/OFF button to clear the TIMER REC indication.
- 2 Press the TIMER REC CHECK button to select the program number to be changed.
- 3 Set another program with the Commander then press the TRANSMIT button.
- 4 The new program has been set and "TIMER REC" indicator on the unit turn on.

Clearing a Preset Timer Setting

- 1 Press the TIMER REC ON/OFF button to clear the TIMER REC indicator.
- 2 Press the TIMER REC CHECK button, then select the program number to be cleared.
- 3 Press the TIMER REC CLEAR button.
- 4 When other timer settings exist, press the TIMER REC ON/OFF button to turn the "TIMER REC" indicator on.

Stopping Timer-Activated Recording in Progress

Press the TIMER REC ON/OFF button.
Recording will stop.

Using the Unit before Timer-Activated Recording Starts

- To start using the VTR
Press the TIMER REC ON/OFF button to turn off the "TIMER REC" indication in the display window on the unit.
- To quit using the VTR
Press the TIMER REC ON/OFF button to turn on the "TIMER REC" indication in the display window on the unit.

To Store the Frequently Used Items in the Commander

The items selected for one timer recording program will be erased from the LCD when the Commander cover is closed.

However, the turn-on/turn-off time and the program position of up to four programs can be stored in the Commander to be recalled later.

This enables you to quickly access the most frequently used items, especially your favorite weekly programs. The recording date will automatically be shifted to the next week after the recording is over.

It will be cleared from the program list when recording is over.

Operation

Example: To store a timer recording data in MEMORY A.

- 1 Press MEMORY to indicate MEMORY A.**
- 2 Set all of the items for timer recording referring to "Timer-Activated Recording-Setting the timer."**
- 3 Press MEMORY to change the indication to B, C, or D, and repeat step 2 for other programs.**
The items set will be kept in the memory even when the Commander cover is closed.

Recalling and Changing the Items

- 1 Press MEMORY to call up the desired memory indication (A, B, C, or D).**
- 2 Make whatever changes necessary.**
- 3 Press TRANSMIT.**
The VTR enters the timer recording standby mode.

How to clear a memory

A timer setting memory can not be cleared. But it will be replaced with new one(s) by pressing MEMORY to call one(s) of A to D.

About the VPS Switch

To avoid missing a timer-activated recording because of a delay in the transmission sequence or a change in the program schedule, the West German broadcasting stations have agreed to transmit a special code, called the VPS (Video Program System) code, together with the TV program. The VTR is equipped with a VPS switch which allows you to preset recording times and insures that your programs will be recorded regardless of delays.

- 1 Set the VPS switch to ON.**
The VPS indication appears in the display window.
- 2 Set the timer to the time listed in the VPS program guide which corresponds to the program you want to record.**

Notes

- The VPS function can be turned on only when the TIMER REC indicator is turned off.
- If the VPS signal was not received on the VTR because it was too weak or because the station failed to transmit, timer recording will be performed without the VPS function regardless of the VPS indication.
- The recording will stop when the VTR receives a VPS program interruption code during recording, for example, when an urgent news bulletin was inserted. As soon as the interrupted program resumes, recording will continue.

VPS Standby Mode

The VTR will be turned on to standby for VPS recording before the turn-on time and remains turned on past the preset turn-on time until the VPS signal is received to prepare for any change in the actual broadcast time.

When the VPS timer recording is set for a program which is expected to start between 4:00 and 23:59?
The VTR will be turned on at 0:00 that day and will keep on waiting for the VPS signal until 4:00 of the next day.

When the VPS timer recording is set for a program which is expected to start between 0:00 and 3:59?
The VTR will be turned on at 20:00 the day before the recording day and will keep on waiting for the VPS signal until 4:00 on the next day.

If the actual recording time overlaps with the next timer recording program

There may be cases when the actual broadcast time of two timer recording programs overlap owing to the shift made by the VPS signal. In this case, the program that was broadcast first always has priority. The recording of the second program will begin only after the first program is over.

Quick Timer Recording

What is Quick Timer Recording?

With the quick timer recording function, simple and rough timer recordings can be made. The timer can be set to operate within 5 hours in units of 30 minutes.

Operation

- 1 Check the following items.
INPUT SELECT : Displays "TUNER" in the window
REC MODE SP/LP : SP or LP
REC LEVEL : Approximate standard on 5 position
- 2 If the cassette is not inserted, insert it.
- 3 Press the QUICK TIMER button
 The channel can be changed while the channel indicator is blinking (for about 25 seconds).
- 4 Press the QUICK TIMER button repeatedly to select recording time.
 Each press of the button increases the preset recording time up to 5 hours in units of 30 minutes.
- 5 When the TIMER COUNTER counts down to "0:00", the VTR is stopped and the power is turned off.

During quick timer recording, the recording time can be changed by pressing the QUICK TIMER button. During recording, the time displayed will count down in units of one minute.

Function available during Quick Timer Recording

Stopping recordings in progress

Press the TIMER REC ON/OFF button.
 (The ■ STOP button does not work.)

Changing recording time

Press the QUICK TIMER button

Checking the timer

Press the TIMER CHECK button. (Preset programs will be displayed in the window on the unit.)

Resuming "0H00M00S" on the counter preset program
 Press the COUNTER RESET button.

Monitoring another channel

Press the TV/VTR button.

Monitoring bilingual sound

Press the MAIN/SUB button.

Caution

- The QUICK TIMER button does not work during the timer setting standby mode. Press the TIMER REC ON/OFF button to clear the "TIMER REC", then press the QUICK TIMER button again.
- When the opening on the cassette rear is red (closed), the tape cannot be recorded. Then, if the QUICK TIMER button is pressed, the cassette will be ejected. Insert a cassette with its opening not closed (not red) and press the QUICK TIMER button again.

If a power interruption occurs

Recording will stop and power will turn off.
 If the power interruption lasted for about 1 hour or less and recording time remains, recording will resume after the power comes back on.

Editing Tapes

▲ shows the direction of the signal flow.

To Edit the Entire Tape to Another Tapes

When a video camera recorder or another VTR is connected to this VTR via the CONTROL L (LANC) jack, the synchronized editing function can be used (see page 38).

(1) Editing a tape on this VTR from a video camera recorder or another VTR

Example: Using a video camera recorder as the player via the LINE IN 2 AUDIO/VIDEO jack on this VTR.

Preparation

- Connect the equipment involved. If the video camera recorder is a monaural type, connect the white plug (AUDIO L) of the supplied connecting cable to the audio jack. (When stereo, connect to L and R.)
- Select the REC MODE (tape speed) on this VTR, SP or LP, using the REC MODE SP/LP button.
- Press the INPUT SELECT button to select LINE IN 2. Then "L2" will appear in the display window on this VTR. (When connected to LINE IN 1, press The button to select LINE IN 1 and to display "L1" in the display window.)
- Press the EDIT button so that "EDIT" appears in the display window.
- Adjust the REC LEVEL control to around 5.

Operation

- 1 Turn on the power of the equipment to be used. Insert the original cassette into the player and a new cassette into this unit.
- 2 Set the player to the playback pause mode and set the EDIT button to ON.
- 3 Set this unit to the recording pause mode.
- 4 Release the pause modes simultaneously.

Notes

- When the player is a stereo type, connect the audio plugs to the left and right jacks.
- LINE IN 1 VIDEO/AUDIO can be also connected to for use.

Editing from a tape on which the bilingual broadcast is recorded

When editing on this VTR via VIDEO/AUDIO LINE IN jack from another VTR, press the AUDIO LINE IN button to display "MAIN" in the display window. Then the MAIN/SUB sound is recorded on both standard and PCM tracks.

After editing, press the button again to display "STEREO".

- Playback the tape on the other VTR with displaying MAIN/SUB.
- Refer to the instruction manual of the other VTR.

- DC in cord (supplied) supplies DC power for the Sony 8mm video camera recorder directly.

▲ shows the direction of the signal flow.

(2) Editing a tape on another VTR from this unit

When this unit is the player and another VTR is the recorder:

Operation

- 1 Turn on the power of the equipment to be used. Insert the original cassette to this unit and a new cassette to another VTR.
- 2 Set the input select switch of another VTR to LINE.
- 3 Set this unit to the playback pause mode and press the EDIT button. The "EDIT" indication will light in the display window.
- 4 Set another VTR to the recording pause mode.
- 5 Release the pause modes simultaneously.

The EDIT button

When editing a tape, press this button so that the "EDIT" indication lights in the display window. Deterioration of picture quality will be avoided. Press again after editing.

The SHARPNESS control will not function when the EDIT button is pressed.

Notes

- Avoid repetition of editing tapes, as the picture and tone quality will be impaired noticeably for newly edited tapes.
- When you make the recording and playback connections simultaneously to the same VTR, noise may come out.
- When another VTR is a monaural type, use the optional RK-C72 connecting cable.

Editing only Desired Scenes

Cutting out unnecessary scenes
If another VTR has the CONTROL L (LANC) jack, the synchronized edit function can be used (see page 38).

- ② original tape
- ③ edited tape
- ① cut out
- ④ cut out

Example: Using a video camera recorder as the player via the LINE IN 2 AUDIO/VIDEO jack on this VTR.

Preparation

- Select the tape speed, SP or LP, on this VTR using the REC MODE selector.
- Press the INPUT SELECT button to select LINE IN 2, then "L2" will appear in the display window on this VTR. (When connected to LINE IN 1, press to select LINE IN 1, then "L1" will appear in the display window.)
- Set the EDIT button to ON then "EDIT" will appear in the display window.
- Adjust the REC LEVEL control to around 5.

Operation

- 1 Turn on the power of the equipment to be used. Insert the original cassette to the player and a new cassette into this unit.
- 2 Set the EDIT switch to ON.
- 3 Edit the tape while viewing the playback picture, and set this unit to the recording pause mode at the point where no picture is recorded.
- 4 Set the player to the playback pause mode at the point where the desired picture is recorded.
- 5 Release the pause modes simultaneously.

Repeat steps 4 to 5 for recording other desired scenes.

* DC in cord (supplied) supplies DC power for the Sony 8mm video camera recorder directly.

▲ shows the direction of the signal flow.

Insert Editing

Inserting another scene into a recorded tape (original tape) is called "Insert Editing". This technique is used to replace an unnecessary scene with another one. If the other VTR has a CONTROL L (LANC) jack, the synchronized edit function can be used.

- ② original tape
- ③ edited tape
- ① starting point
- ④ ending point

Preparation

- Set the REC MODE SP/LP to the same mode of the recorded tape (original tape).
- Press the EDIT button so that appears in the display window.
- Adjust the REC LEVEL control to around 5 position.

Operation

- 1 Turn on the power of the equipment to be used. Insert the cassette with the scenes into the player. Insert the original cassette into this VTR.
- 2 Locate the ending point on the original tape by pressing ◀ REW or ▶ FF button during playback. Then press the COUNTER RESET button (0H00M00S).

- 3 Locate the starting point on the original tape by pressing ◀ REW button during playback. Set this VTR to the recording pause mode.

- 4 Locate the starting point of the scene to be inserted on the player and set it to the playback pause mode.
- 5 Release the pause modes simultaneously. The recording stops automatically at the ending point (0H00M00S).

For better editing

Release the playback pause mode a little earlier than the recording pause mode.

Notes

When the edited tape is played back, the picture may be disturbed momentarily at the ending point.

Synchronized Editing

◀ shows the direction of the signal flow.

Overview

When a Sony VTR with the CONTROL L (LANC) jack or a video camera recorder is connected, the synchronized editing function can be used. This function allows one VTR to control another VTR while editing. (Connect to the LINE IN 2 AUDIO/VIDEO on this VTR.)

LANC switch

This switch is used to select control of the other VTR with this VTR, or control of this VTR with the other VTR.
M: Controls the other VTR with this VTR.
S: Control this VTR with the other VTR or editor.
 When both VTRs have a LANC switch, decide which is to be M and which is S. Then select the LANC switch on both VTRs accordingly.

Selecting SHUTTLE A-B switch

Select the SHUTTLE A-B switch according to the type of VTR connected to this VTR.

- A:** The player VTR or camcorder without the JOG/SHUTTLE controls the other VTR (recorder) and any option is not applicable.
- B:** The player VTR with the JOG/SHUTTLE controls the other VTR or an option is applicable.

Connection

Example: When a video camera recorder is used as the player

Notes

- When the video camera recorder is a monaural type, connect the white plug of the supplied connecting cable to the AUDIO L jack. (When stereo, connect to L and R.)
- The power for the Video Camera Recorder (DC 7.5 V 1.6 A) is supplied from the DC OUT FOR CAMCORDER jack on the unit.
- DC In cord (supplied) supplies DC power for the Sony 8mm video camera recorder directly.

Preparation

- Select the tape speed, SP or LP, on REC MODE SP/LP button on this VTR.
- Select A on the SHUTTLE A-B switch.
- Select M on the CONTROL L switch.
- Connect the Video Camera Recorder to the LINE 2 jack.
- Adjust the REC LEVEL control to around 5 position.

Operation

- 1 Turn on the power of the equipment to be used. Insert the cassette.**
Insert a cassette for recording into this VTR and a recorded cassette into the other VTR.
- 2 Press the EDIT STANDBY button.**
The EDIT STANDBY indicator and the player indicator will light. The LINE IN switch is set automatically to LINE IN 2 (L2).
The Video Camera Recorder (player side) enters the playback pause mode and this VTR enters the recording pause mode.
The picture from the player will be displayed on the screen.
- 3 Search for the starting point to be recorded on the player.**
If the PLAYER button indicator does not light on, press the PLAYER button to turn the indicator on. Then search for the starting point of the scene to be recorded on the player tape using the EDIT SHUTTLE control.
Release your finger from the EDIT SHUTTLE at the starting point to resume the playback pause mode.
- 4 Press the RECORDER button on the recorder to light the indicator on. Search for the starting point to be recorded over using the EDIT SHUTTLE control.**
To search for the point to be recorded over on the recording tape, turn the EDIT SHUTTLE to change to the picture on the recorder.
Release your finger from the EDIT SHUTTLE at the starting point to resume the recording pause mode. The screen will display the picture on the player.
- 5 Press the SYNCHRO EDIT button.**
Both the player and the recorder are released from the pause mode. Then playing and recording will start.

Note

Operate as described in steps 3 and 4 above to select the starting point for recording/playback. Press the SYNCHRO EDIT button again to start editing.
Repeat the steps 3 to 5 to edit.

To stop the synchronized editing

Press the EDIT STANDBY button. The lamp lights off and both the player and the recorder enter the stop mode. The INPUT SELECT will change to TV and the received TV program will appear on the screen.

Dubbing the Audio Signals

You can additionally record music or narration on the PCM track of your tape, while the picture and sound pre-recorded on the standard track are unchanged.

Connection on the Audio Source

Notes

- Sound from the microphone is recorded in monaural.
- When the microphone is not in use, do not connect the microphone to the MIC jack or the sound will be mixed with the sound from the LINE IN AUDIO 1 or 2.
- Refer to each instruction manuals.

Tips for dubbing

- For fade-in operation, adjust the REC LEVEL control from the zero point to the normal position. For fade-out operation, turn it from the normal position to the zero point (LINE IN AUDIO only).
- The sound from the LINE IN AUDIO 1 jack on the rear panel or LINE IN AUDIO 2 jack on the front panel and the MIC jack can be mixed.
- Adjust the balance of the sound on the standard track and the sound dubbed on the PCM track with the REC LEVEL control.

▲ shows the direction of the signal flow.

Operation

Preparation

- Turn on the TV and select the channel for the VTR or select the input for the VTR.
- Set the AUDIO MONITOR selector to PCM.
- Press the INPUT SELECT button so that the L1 or L2 indication lights.
- Adjust the REC LEVEL control to an appropriate level watching the level meter.

Operation

- 1 Insert the cassette.
- 2 While viewing the picture, decide the point to start audio dubbing and press the **II/PAUSE/STILL** button.
- 3 Press the **AUDIO DUB** button.
- 4 Playback the audio sources and adjust the **REC LEVEL**.
- 5 Press the **II/PAUSE/STILL** button to release the pause mode, and at the same time start the audio source.

To stop audio dubbing momentarily
Press **II/PAUSE/STILL** or **II PAUSE** on the Commander.

To stop audio dubbing
Press **STOP**.

To dub sounds from the TV
Press the **INPUT SELECT** button to select the "TUNER". Other operations are the same as the above steps.

Notes

- The dubbed sound cannot be played back by a VTR without PCM recording or playback functions.
- The pre-recorded sound on the PCM track will be erased by dubbing.
- During dubbing, black bars will appear in the center and lower positions of the screen. But it has no effect on the recorded images. Picture may shake or colours may fade with certain TVs.

Connections

Notes

- Unplug each unit from the mains outlet before making the following connections.
- Make sure the connections are secure. A loose connection may cause a noisy picture.

A Connecting a TV without Video/Audio Input Jacks

- 1 Remove the aerial cable from its socket on the TV. Then connect the aerial cable to AERIAL IN on the recorder.
- 2 Connect the aerial input of the TV to AERIAL OUT on the recorder, using the supplied cable.

B Connecting a TV Equipped with Video/Audio Input Jacks

- 1 Remove the aerial cable from its socket on the TV. Then connect the aerial cable to AERIAL IN on the recorder.
- 2 Connect the aerial input of the TV to AERIAL OUT on the recorder, using the supplied cable.
- 3 Connect EURO-AV of the recorder to the audio/video inputs (VIDEO/AUDIO IN, MULTI IN, or 21-pin SCART or PERI-TV) on the TV using an appropriate cable. This connection provides better-quality playback picture and sound.

How the recorder is set up to intercept all signals from the aerial on their way to the TV. The recorder then passes on the signals to the TV. This is why you can record a colour while it is being shown on the TV, or while the TV is showing another colour, or even when the TV is turned off.

C Connecting a Colour Monitor

- 1 Connect the aerial cable to AERIAL IN on the recorder.
- 2 Connect EURO-AV on the recorder to the audio/video inputs (VIDEO/AUDIO IN, MULTI IN, or 21-pin SCART or PERI-TV) on the monitor using an appropriate cable.
- 2' Connect to the AUDIO/VIDEO inputs on the monitor using 3 phono to 3 phono connecting cord.

Note

To use the Sony KX-series colour monitor, connect the recorder to the BNC-type VIDEO IN and phono-type AUDIO IN connectors on the monitor.

Notice on connection with a colour monitor

Connection between AERIAL OUT of the recorder and the colour monitor is not possible since the monitor is not equipped with a tuner. For this reason, you cannot watch a TV program while recording another program on the recorder.

Notice for customers in a strong signal area

The recorder has booster to assure stable TV reception. However, in areas near TV stations, where the TV signal is very strong, the picture may be affected by the booster. If this happens, set DX/LOCAL on the rear panel to LOCAL.

D Connecting an Audio System

You can listen the sound of a cassette by connecting your stereo system.

Connect LINE OUT AUDIO of the VTR to the TAPE IN (or AUX IN) jack of a stereo amplifier.

Notes

- If the VTR is installed near a tuner or a radio, noise may occur in the AM reception. In this case do one of these: keep the VTR away from the tuner or the radio, adjust the AM bar antenna for minimum noise, or connect an external AM antenna to the tuner.
- Note that PCM recorded cassette reproduce sounds over a wide dynamic range. Adjust the volume carefully to protect your speaker from damage.
- Before connecting or disconnecting the power cord of the VTR, be sure to turn the amplifier off.

Adjusting the TV (To connect this VTR to a TV without video/audio inputs)

A Making connections

- 1 Unplug the aerial's lead from the TV and plug it into AERIAL IN on the VTR.
- 2 Plug the supplied coaxial cable into the TV and the AERIAL OUT on the VTR.

B Adjusting the RF channel

- 1 Turn the TV on and select an empty program.
- 2 Turn the VTR on and playback a prerecorded tape. (See page 14)
- 3 Adjust the TV so the tape that is played back appears clearly on the screen.
- 4 If the playback picture is not free of disturbance, use the supplied screwdriver to adjust the RF CHANNEL to a channel which is not active in your area.

Note

Now your TV is tuned to receive the VTR's playback picture. Whenever you playback a tape, select the program you chose in step 1. If you are not sure how to tune your TV, refer to the TV's instruction manual or consult your dealer.

Presetting TV Channels

Selecting TV Channels

This VTR is capable of receiving the following channels:
VHF channels E2 – E4, E5 – E12
UHF channels E21 – E69
Cable TV channels S01 – S03, S1 – S20 and S21 – S41

- The receivable channels are governed by the TV broadcasting system in your area.
- Up to 60 channels can be allocated to any desired program position.

- 1 Press SET button.
- 2 Select the desired program position by pressing PROGRAM +/-.
- 3 Select the normal programs or CATV programs with the NORMAL/CATV button. CATV will be displayed when CATV is received into the TV set.
- 4 Press TUNING +/- button and select the channel number
- 5 To allocate a channel to the next program position, repeat steps 2 to 4.
- 6 Press SET button again.

To Allocate the Channels Directly

In step 4, enter the desired program numbers using the program position number and +/- buttons on the Commander.

To enter one's digits, press 0 and then the desired number. To enter two digit numbers, press +/-, the ten's digit number, and lastly the one's digit number.

Channel scanning on your VTR

- When TUNING + is pressed in steps 4 channels are scanned in the following order. When TUNING – is pressed the scanning order is reversed.
VHF (E2-E12) → UHF (E21-E69) → CATV (S1-S20) → HYPER BAND (S21-S41) → CATV (S01-S05).
- In Italy, channels 13 to 20 correspond to channels A to H.

- Program position
- Channel number

Erasing Unwanted Program Positions

The VTR can be preset so that only the desired program positions will appear when you press PROGRAM +/-.

- 1 Press SET button.
- 2 Press PROGRAM +/- for displaying the unused program position.
- 3 Press CLEAR.
- 4 Repeat steps 2 and 3 to erase other program positions.
- 5 Press SET.

To enter the erased program positions again Follow the procedure in "Selecting TV Channels."

- Ⓐ When SET button is pressed
- Ⓑ When CLEAR button is pressed

Manually Fine-tuning a Weak station

Normally set to AFT ON, the VTR automatically tunes the received channels. However, when the program received on the VTR is distorted due to signal interference, manual fine tuning may solve the problem.

- 1 Select the distorted program position by pressing PROGRAM +/-.
- 2 Press the TUNING +/- buttons simultaneously. The AFT indicator disappears. To resume the AFT ON mode, press the CLEAR button.
- 3 Press the TUNING buttons + or - for searching the clear displaying point.
- 4 Press the TUNING +/- buttons simultaneously for setting.

Precautions

On safety

- Should any solid object or liquid fall into the cabinet, unplug the unit and have it checked by qualified personnel before operating it any further.
- Unplug the unit from the wall outlet if it is not to be used for an extended period of time. To disconnect the cord, pull it out by the plug. Never pull the cord itself.

On installation

- Allow adequate air circulation to prevent internal heat build-up. Do not cover the holes on the top panel.
- Do not place the unit on surfaces (rugs, blankets, etc.) or near materials (curtains, draperies) that may block the ventilation slots.
- Do not install the unit near heat sources such as radiators or air ducts or in a place subject to direct sunlight, excessive dust, mechanical vibration or shock.
- The unit is designed for operation in a horizontal position. Do not install it in an inclined position.
- Keep the unit and cassette tapes away from equipment with strong magnets, as for example a microwave oven or a large loudspeaker and so on.
- Do not place any heavy object on the unit. Never place any object on the tuning compartment nor on the top of the front panel.

On operation

- When the unit is not in use, turn the power off to conserve energy and to extend its useful life.
- Remove and store a video cassette after recording or playback.

On cleaning

Clean the cabinet, panel and controls with a dry soft cloth, or a soft cloth lightly moistened with a mild detergent solution.

Do not use any type of solvent, such as alcohol or benzene which might damage the finish.

On repacking

Do not throw away the carton and packing materials. They make an ideal container in which to transport the unit. When shipping the unit to another location, repack it as shown the illustration on the carton.

On cassette care

Store cassettes in their cases and keep them in an upright position to prevent intrusion of dust and uneven winding.

On moisture condensation

• Main Unit

Do not operate the unit right after having transported it from a cold location to a warm location or in a room where the temperature rises suddenly, because moisture may condense in the operating section of the unit. Wait for about an hour before turning the power on in the new location or keep the rise in room temperature gradual. If the unit is operated with moisture condensation, the unit and the tape may be damaged. Therefore remove the tape immediately when there is a possibility of moisture condensation and no picture is obtained. To evaporate the moisture rapidly, leave the player turned on without a tape loaded.

• Cassette

When a cassette tape is carried from a cold place to a warm place, the cassette tape may become wet with dew created by moisture condensation. When there is any possibility of moisture condensation, eject the cassette tape and leave it outside of the compartment for about one hour.

If you have any questions about this unit, contact your Sony dealer.

Notes on Video Heads

Video heads cleaning

VTRs used for a long time may play back the rough picture or do not display the picture. The possible cause may be the contamination of the video heads. In such a case, clean the video heads at first. Use the video head cleaning tape V8-25CLH (not supplied) or ask the Sony service personnel to clean the video heads.

If the picture is not clear in using a cassette tape of another type, sometimes it is effective to use the video head cleaning tape. Use it after reading the instruction manual carefully.

Video heads wear by long time using

If the VTR displays unclear picture after cleaning of the video heads, the replacement of the video heads is necessary. Consult the dealer or the Sony representative.

Check the video heads after 1,000 hours use.

VTR is a high precision machine. It must record on or play back from magnetic tapes on which the image signals from the colour TV or the video camera recorder are recorded.

The video heads or mechanical parts to transport the tape are contaminated or worn in a long time use. It is recommended to have the VTR checked (cleaning, oiling and replacing worn parts) about 1,000 hours interval.

Use the video cleaning tape if you find the symptom as follows:

Normal picture

Symptoms caused by contaminated video heads

- Rough picture
- Unclear picture
- No picture

Initial

terminal

Above symptom may occur in playback.
Most possible cause of this may be the contamination of video heads.
Purchase the video cleaning tape V8-25CLH at your dealer or a Sony shop.

Troubleshooting

The following checks will assist you in correcting most problems which you may encounter with your VTR. Should any problem persist after you have made these checks, consult your nearest Sony service facility. Before going through the check list below, first refer back to the connection and operation procedures.

Symptom	Possible causes and corrections
The ON/STANDBY switch does not function.	<ul style="list-style-type: none"> • The power cord is disconnected. • The recorder is in the timer standby mode. (Press TIMER REC so that the TIMER REC indication goes off.)
The clock blinks showing "Su 0:00".	There has been a power interruption. Reset the clock time and timer settings. ⑦
Picture being recorded cannot be monitored on the TV screen.	<ul style="list-style-type: none"> • Press TV/VTR so that the VTR indication is displayed in the display window. • The channel for the VTR is not correctly tuned on the TV.
TV program is not clearly displayed on the TV screen or no picture is displayed on the screen.	<ul style="list-style-type: none"> • The VTR indication is not displayed. Press the TV/VTR button. ⑩ • The channel for the VTR is not correctly tuned or the video input is not selected on the TV. • The CLOUR SYS selector is not set correctly.
When the ●REC buttons are pressed, the cassette is ejected.	The tab on the cassette is slid out (red). ⑤
Recording cannot be done correctly.	<ul style="list-style-type: none"> • The input is not selected correctly. ① • The cassette is not inserted. • The connecting cord is not connected to the LINE IN VIDEO/AUDIO jacks. ⑪
Playback picture is not clearly displayed on the TV screen.	<ul style="list-style-type: none"> • The channel for the VTR is not correctly tuned or the video input is not selected on the TV. • The video heads may be contaminated. ⑩ Clean the heads using the Sony video head cleaning cassette. For details on cleaning, refer to the instructions furnished with the cleaning cassette. • Adjust the SHARPNESS control. • Hi8 recorded tape is played back.
Stereo programs are heard in monaural	<ul style="list-style-type: none"> • Set the AUTO STEREO switch ON. ① • Set the AUDIO MONITOR selector to PCM. ⑪ • No sound is recorded on the PCM track. • The tape is audio dubbed.
The picture shakes in the picture search mode.	Adjust the vertical hold control on the TV.
Timer setting cannot be made.	The clock is not set. ⑦
The cassette is ejected when the TIMER REC button is pressed.	The tab on the cassette is slid out.
A timer recording cannot be made.	<ul style="list-style-type: none"> • There has been a power interruption. ⑦ • The TIMER REC button has not been pressed. ③ • The cassette is not long enough to record. • The clock is not set correctly. ⑦
The Remote Commander cannot be operated.	<ul style="list-style-type: none"> • The batteries are exhausted. ⑤ • Set the COMMAND MODE, VTR1, VTR2 or VTR3, identically on both the unit and the Remote Commander. ⑤
Sounds from the LINE IN AUDIO jacks cannot be heard.	The REC LEVEL control is at lower level position. ⑫
The VTR does not operate to any button.	<ul style="list-style-type: none"> • The built-in microprocessor seems to work wrong. ⑨ Pressing the CL (reset) button with a pointed object, such as a ball point pen, may cause to resume. (All of the information such as the clock or the preset programs stored will be cleared.)

SECTION 3 DISASSEMBLY

3-1. UPPER CASE, BOTTOM and FRONT PANELS

3-2-1. Removal of VI-98, PC-50, FL-41, FR-60, MC-60, DJ-10 and FJ-11 boards

3-2-2. Removal of board connected with BOARD TO BOARD connector

Example: VI-98 board is removed from IN-40 board.

- 1) Raise the VI-98 board as shown in **A**.
- 2) Draw the VI-98 board in the direction of 20° from the IN-40 board as shown in **B**.
- 3) Remove another PC-50 board in the same way.
- 4) To mount a board, engage the connector into the socket as shown in **C** and insert.

Note: If forcefully pulled, the connector or pattern may be damaged, so be careful.

3-3-1. Removal of Power block and ST-41, IN-40, RP-69, and TU-100 boards

3-4. Removal of CM-13 and UC-3 boards

3-3-2. Removal of CC-23 board

3-5. Removal of REAR FRAME, RF MODULATOR and RJ-20 board

3-6. Removal of MD, and CASSETTE COMPARTMENT BLOCK

3-7. Removal of MAIN MD UNIT

3-8. INTERNAL VIEW OF MECHANICAL DECK UNIT AND NAME OF EACH PART

4-15. AUDIO BLOCK DIAGRAM

SECTION 5

PRINTED WIRING BOARDS AND SCHEMATIC DIAGRAMS

5-1. FRAME SCHEMATIC DIAGRAM

5-2. PRINTED WIRING BOARDS AND SCHEMATIC DIAGRAMS

THIS NOTE IS COMMON FOR PRINTED WIRING BOARDS AND SCHEMATIC DIAGRAMS.
(In addition to this, the necessary note is printed in each block.)

For printed wiring boards:

- : indicated a lead wire mounted on the component side.
- : indicated a lead wire mounted on the conductor side.
- : Parts mounted on the conductor side.
- ▨ : Pattern from the side which enables seeing. } The inner two layers' patterns are not indicated.
- ▩ : Pattern of the rear side.*
- Circled numbers refer to waveforms.*
- (B) or (F), etc. of capacitors indicate the temperature characteristics.

Caution:

Pattern face side: Parts on the pattern face side seen from (Conductor Side) the pattern face are indicated.
Parts face side: Parts on the parts face side seen from the (Component side) parts face are indicated.

For schematic diagram:

- Caution when replacing chip parts.
New parts must be attached after removal of chip.
Be careful not to heat the minuts side of tantalum capacitor, because it is damaged by the heat.
- All resistors are in ohms, 1/4W (Chip resistors: 1/10W) unless otherwise noted.
kΩ: 1000Ω, MΩ: 1000kΩ.
- All capacitors are in μF unless otherwise noted. pF: μμF 50V or less are not indicated except for electrolytics and tantalums.
- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.
- ⎓ : nonflammable resistor.
- ⎓ : fusible resistor.
- : panel designation.
- △ : internal component.
- : adjustment for repair.*
- : B + Line.*
- - - : B - Line.*
- ↔ : IN/OUT direction of (+, -) B LINE.*
- Circled numbers refer to waveforms.*
- Voltages are DC between measurement points and ground unless otherwise noted.*
- Readings are taken with a color-bar signal input.*
- Readings are taken with a digital multimeter (DC10MΩ).*
- Voltage variations may be noted due to normal production tolerances.*
- Circled numbers refer to waveforms.
- *: indicated by the color red.

When indicating parts by reference number, please include the board name.

Note:
The components identified by mark △ or dotted line with mark △ are critical for safety.
Replace only with part number specified.

RP-69 (HEAD AMP) PRINTED WIRING BOARD
—Ref. No. RP-69 Board: 1000 series—

Caution:
Pattern face side: Parts on the pattern face side seen from (Conductor Side) the pattern face are indicated.
Parts face side: Parts on the parts face side seen from the (Component side) parts face are indicated.

SECTION 6
EXPLODED VIEW

NOTE:

- -XX, -X mean standard parts, so they may have some differences from the original one.
- The construction parts of an assembled part are indicated with a collation number in the remark column.

- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- The mechanical parts with no reference number in the exploded views are not supplied.

The components identified by mark Δ or dotted line with mark Δ are critical for safety. Replace only with part number specified.

SECTION 7

ELECTRICAL PARTS LIST

RP-69

NOTE:

The components identified by mark Δ or dotted line with mark Δ are critical for safety. Replace only with part number specified.

When indicating parts by reference number, please include the board name.

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- -XX, -X mean standardized parts, so they may have some difference from the original one.
- RESISTORS
All resistors are in ohms
METAL : Metal-film resistor
METAL OXIDE : Metal Oxide-film resistor
F : nonflammable

- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- SEMICONDUCTORS
In each case, U: μ , for example:
UA...: μ A..., UPA...: μ PA...,
UPB...: μ PB..., UPC...: μ PC...,
UPD...: μ PD...
- CAPACITORS
MF : μ F, PF : μ F
- COILS
MMH : mH, UH : μ H

SECTION 8

MECHANICAL ADJUSTMENT

HOW TO ADJUST MECHANICAL UNIT

For the adjustment and checking of the mechanical unit and methods for replacing camera parts, see the separate 8 mm Video Mechanical Unit Adjustment Guide III U Mechanism (9-972-732-11).

However, see the following for the setting of track shift mode.

8-1. TAPE PASSING ADJUSTMENT (TRACK SHIFT)

The 8 mm video system employs a ATF (automatic track finding) system with which tape running speed is instantaneously controlled and tracked at high accuracy based on four types of pilot signals. Thus, the tracking adjust knob is no longer required while realizing more precise tracing.

However, controlling of the tape pass system was rather difficult with the ATF system. This was because, even if tracing of the head was slightly deviated, the ATF could automatically compensate it, so complete adjustment was not possible.

To overcome such a trouble in finely adjusting to track, set up track shift mode and adjust it. Thus, the ATF is forcefully controlled to shift tracking quantity by a preset value (about 1/4). Therefore, fine adjustment of tracking can be operated easily. No tracking shift jig is required.

8-1-1. Setting of track shift mode

- 1) Remove the solder on Pin ① A of CM-13 board by ironing and evacuating, thus isolating the pin from the pattern and the land.
- 2) Connect Pin ②, CN001 on the IN-40 board to Pins ① and ③ of CN001 (Test 2).
- 3) Thus, track shift mode is actuated.

8-1-2. Adjustment preparation

- 1) Clean the tape running surface (tape guide, drum, capstan shaft, pinch roller).
- 2) Connect to the oscilloscope.
CH1: RP-69 board CN006 Pin ③ (PB RF)
CH2: RP-69 board CN006 Pin ④ (RF.SWP)
- 3) Replay the alignment tape (WR5-1NP) for tracking.
- 4) Check that the RF waveforms of the oscilloscope at both input and output sides are flat. If not flat, adjust the mechanical unit according to the separate manual U mechanical unit adjustment.
- 5) After completion of adjusting, solder Part A of Pin ① in the CM-13 board.

SECTION 9 ELECTRICAL ADJUSTMENT

For adjusting, see the layout view of parts to be adjusted shown on Page 194 and subsequent ones.

9-1. PREPARATION OF ELECTRICAL ADJUSTMENT

The following measuring equipment is used for electrical adjustments.

(Equipment to be Used)

- 1) Monitor TV
 - 2) Dual trace, oscilloscope having band of over 10MHz delay mode. (Use 10 : 1 probe unless otherwise specified)
 - 3) Frequency counter
 - 4) Pattern generator (equipped with video output terminal)
 - 5) Digital voltmeter
 - 6) Audio generator
 - 7) Audio level meter
 - 8) Audio distortion meter
 - 9) Audio attenuator
 - 10) Audio multiplex signal generator
 - 11) Alignment tapes
 - 12) Vectorscope
- Tracking adjustment (WR5-1CP)
Part code: 8-967-995-07
- Video frequency response adjustment (WR5-6C)
Part code: 8-967-995-17
- Normal mode operation checking
For SP (WR5-5CSP)
Part code: 8-967-995-46
- or (WR5-4SP)
Part code: 8-967-995-47
- For LP (WR5-4CL)
Part code: 8-967-995-56
- AFM Stereo operation checking
For SP (WRS-9CS)
Part code: 8-967-995-28

(Connection of Devices)

Connect measurement devices as follows for adjustment, unless otherwise redquired.

- Input select switchLINE position 1

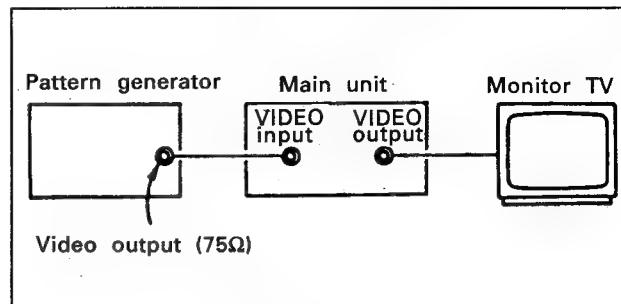

Fig. 9-1

Connect an oscilloscope to the video input terminal and confirm that the amplitude of the sync signal of the video signal is approximately 0.3V and the amplitude of the video section is approximately 0.7V. Confirm that the burst signal amplitude is approximately 0.3V and flat, and that the level ratio of the burst signal and red signal is 0.30 : 0.66. The video signal (color bars) used for adjustment are shown in Fig. 9.2.

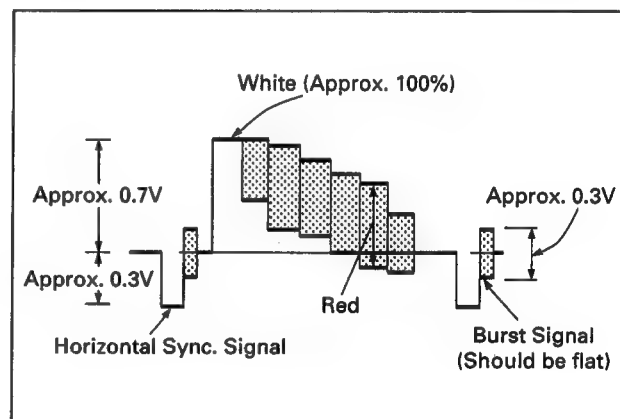

Fig. 9-2 Pattern generator color bar signal

The alignment tapes shown in the table below are available. Use the tape indicated in the signal column of each adjustment section.

When a specific name is not given for use of an operation checking tape, any of the operation checking tapes can be used.

(Alignment Tapes)

Name	Recording Mode	Tape Type	Tape Speed	Contents		Use
				Video Area	PCM Area

Note: Recording modes
STDConventional mode

Tape Types
MPMetal particle tape

The 100% color bar signal recorded on the alignment tape is shown in Fig. 9-3.

Note: Measured at VIDEO OUT terminal (terminated at 75Ω)

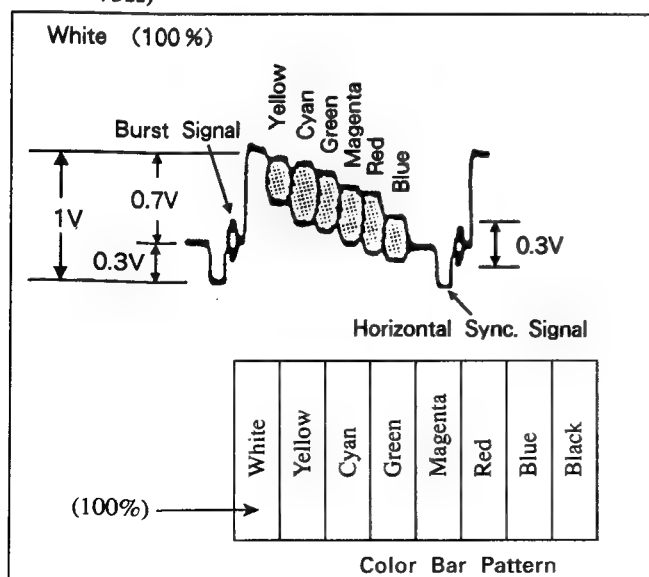

Fig. 9-3 Color bar signal on alignment tape

(I/O Level and Impedance)

Video input Pin jack
Input signal: 1Vp-p, 75Ω unbalanced, negative SYNC

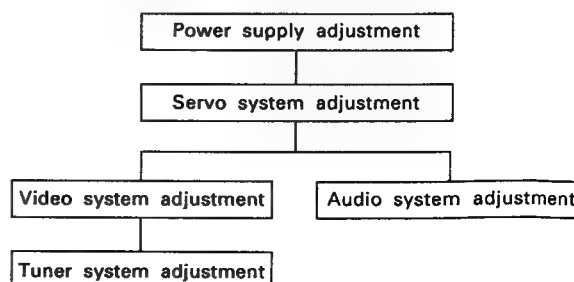

Video output Pin jack
Output signal: 1Vp-p, 75Ω unbalanced, negative SYNC

Audio input Pin jack
Input level: -7.5dBs (0.775Vrms)

Audio output Pin jack
Rated output: -7.5dBs (with 47kΩ load)
Output impedance: Less than 10kΩ

(Adjustment Order)

Perform adjustment in the following order

9-2. CHECKING OF VOLTAGES IN POWER SUPPLY (POWER BLOCK BOARD)

Measure voltages in playback mode.

Checking item	Measurement point	Specified value
1. UN + 5.7V	Pin ②, CN202 (Pin ①, CN202 connected to the negative side)	+5.7V ± 0.6 Vdc
2. UN - 30V	Pin ④, CN202	-30V ± 3 Vdc
3. DC OUT 7.5V	Pin ①, ②, CN203	+7.4V $^{+0.5}_{-0.4}$ Vdc
4. UN + 40V	Pin ①, CN201	+40V ± 2 Vdc
5. SW + 12V	Pin ②, CN201	+12V ± 0.5 Vdc
6. SW + 9V	Pin ③, CN201	+9V ± 0.3 Vdc
7. UN + 9V	Pin ④, CN201	+9.5V ± 0.5 Vdc
8. UN SW + 5.6V	Pin ⑥, CN201	+5.6 ± 0.2 Vdc
9. SW + 5V	Pin ⑦, ⑧, CN201	+5.2V $^{+0.3}_{-0.2}$ Vdc
10. UN SW - 5V	Pin ⑨, CN201	-5V ± 0.3 Vdc
11. SW - 5V	Pin ⑩, CN201	-5V ± 0.3 Vdc

9-3. ADJUSTMENT OF SYSTEM CONTROL CIRCUIT

9-3-1. Micon Oscillator Check (8MHz) (FR-60 Board)

Signal	Free
Measurement point	Pin ⑩, IC005
Instrument	Frequency counter
Specified value	8,050 ± 100 kHz

(Check Methods)

- 1) Check for 8,050 ± 100 kHz.

9-3-2. Tuner and Timer Micon Oscillator Check (32kHz) (FR-60 Board)

Mode	EE
Signal	Free
Measurement point	Pin ⑧ IC005 (BUZZER OUT)
Instrument	Frequency counter
Adjustment element	CT001
Specified value	4,096 ± 0.015 Hz *Note

(Check Methods)

- 1) Adjust the frequency at Pin ⑧, IC005 to 4,096 ± 0.015 Hz using CT001.

* **Note:** The frequency of 32kHz is divided in the IC.

9-3-3. Mode Control Micon Oscillator Check (ST-41 Board)

Mode	EE
Signal	Free
Measurement point	Pin ⑧, IC001
Instrument	Frequency counter
Specified value	4.00 ± 0.04 MHz

(Check Methods)

- 1) Check for 4.00 ± 0.04 MHz.

9-4. ADJUSTMENT OF SERVO SYSTEM

9-4-1. Oscillation Frequency Adjustment (CM-13 Board)

Mode	Record
Signal	Free
Measurement point	Pin ⑦, IC502
Instrument	Frequency counter
Adjustment element	RV501
Specified value	476.54 ± 5.0 kHz

(Adjustment Methods)

- 1) Set oscillation frequency to 476.54 ± 5.0 kHz using RV501.

9-4-2. Switching Position Adjustment (CM-13 Board)

Mode	Playback
Signal	Alignment tape: For operation check (WR5-ICP)
Measurement points	CH-1: Pin ③, IC201 (VIDEO OUT) CH-2: Pin ⑩, IC401 (RF SWP)
Instrument	Oscilloscope
Adjustment element	RV401
Specified value	0 ± 10 μs

(Adjustment Methods)

- 1) Connect Pins ② and ③ of CN001 in the IN-40 board (test 2 MODE)
- 2) Adjust with RV401 so that the marker of the RF CH 2 waveform is lined up with the falling edge of the RF SWP waveform.

Fig. 9-4. Switching position adjustment

9-4-3. PB SP/LP Adjustment (CM-13 Board)

Mode	Variable speed playback (CUE)
Signal	Alignment tape: For operation check (SP mode: WR5-4CSP or another) (LP mode: WR5-4CL or another)
Measurement point	Pins ② and ③, IC302
Instrument	digital voltmeter
Adjustment element	RV301
Specified value	$\frac{(V_s + V_L)}{2}$

(Adjustment Methods)

- 1) Set S110 (SP/LP) to LP and playback the tape for SP mode (WR5-4CSP) in CUE mode.
- 2) Measure the voltage at Pin ② of IC301 at that time, using the digital voltmeter and store. (V_s)
- 3) Set S110 (SP/LP) to SP and playback the tape for LP mode (WR5-4CL) in FF mode.
- 4) Measure the voltage at Pin ③ of IC201 at that time, using the digital voltmeter and store. (V_L)
- 5) Adjust RV301 so that voltages at Pins ② and ③ of IC302 are $\frac{(V_s + V_L)}{2}$.

9-4-4. Capstan FG Adjustment (CM-13 Board)

Mode	REC SP (or LP)
Signal	Free
Measurement point	Pin ⑩, IC201
Instrument	Oscilloscope
Adjustment element	RV201
Specified value	Duty 50% \pm 5%

Fig. 9-5

9-5. ADJUSTMENT OF VIDEO SYSTEM

As a rule, video system adjustment should be performed in accordance with the following order. The color video signal supplied from the pattern generator is used as video input signal for video system adjusting in the recording mode. Confirm that the SYNC signal and color burst signal conform to the set-up specifications during adjustment as shown in Fig. 9-2.

(Adjusting Order)

1. Playback frequency characteristics adjustment
2. Flying erase check
3. Crystal oscillator fo check
4. SYNC AGC adjustment
5. Y/C separation adjustment
6. Burst frag adjustment
7. Emphasis Input adjustment
8. PB CCD Input level adjustment
9. PB Y level adjustment
10. Y FM carrier frequency adjustment
11. Y FM deviation adjustment
12. AC clip check
13. Chroma Emphasis fo adjustment
14. REC Y level adjustment
15. REC C level adjustment
16. Qvasi burst phase adjustment
17. Delay burst phase adjustment
18. REC ATF level confirmation

9-5-1. Playback Frequency Characteristics Adjustment (RP-69 Board)

1. Adjustment of CH1 and CH2

The adjustment element for CH2 is shown in ().

Mode	Playback
Signal	Alignment tape: For adjusting frequency characteristics (WR5-6C)
Measurement point	Pin ③, CN006 External trigger: Pin ④, CN006 Trigger slope: - (+)
Instrument	Oscilloscope
Adjustment element	RV004 (RV003)
Specified value	5.5MHz level: 3.58MHz level = 3 : 4

(Adjustment Methods)

- 1) Adjust RV004 and RV003 so that the ratio of 3.58MHz level and 5.5MHz level is 4 : 3 (4 : 3).

Fig. 9-6 Playback frequency characteristics adjustment

2. Adjustment of CH1'

Mode	Playback pause
Signal	Alignment tape: For adjusting frequency characteristics (WR5-6C)
Measurement point	Pin ①, CN006 External trigger: Pin ④, CN006 Trigger slope: +
Instrument	Oscilloscope
Adjustment element	RV201
Specified value	Ratio of 5.5MHz level to that of 3.58MHz is 4 : 3.5

(Adjustment Methods)

- 1) Connect pins ② and ③ of CN001 in IN-40 board. (Test 2 MODE)
- 2) Adjust RV201 so that the ratio of 5.5MHz level to that of 3.58MHz becomes 4 : 3.5.

9-5-2. Flying Erase Check (RP-69 Board)

Mode	Recording
Signal	Arbitrary
Measurement point	Pin ②, CN001
Instrument	Frequency counter and oscilloscope
Specified value	Frequency: $8.3 \pm 0.5\text{MHz}$
Specified value	Voltage: Approx. 8Vp-p or more

Note: 1) Use an MP type tape.

- 2) Connect the frequency counter via a buffer amplifier (oscilloscope or the like) with a high input impedance ($1\text{M}\Omega$ or more) and low capacitance (10pF or less).

(Check Methods)

- 1) Check for $8.3 \pm 0.5\text{MHz}$ and about 5.0Vp-p.

Fig. 9-7 Flying erase check

9-5-3. Crystal Oscillator f_0 Check (VI-98 Board)

Mode	Playback
Signal	Alignment tape: For operation check (WR5-3CSP)
Measurement point	Pin ⑩, IC001
Instrument	Frequency counter
Specified value	$4433619 \pm 150\text{Hz}$

Note: Connect the frequency counter via a buffer of high impedance (approx. $10\text{M}\Omega$) and low capacitance (less than 10pF).

Fig. 9-8 Crystal oscillator f_0 check

9-5-4. SYNC AGC Adjustment (VI-98 Board)

Mode	E-E
Signal	Color bar
Measurement point	Pin ⑤ of IC001
Measuring instrument	Oscilloscope
Adjusting element	RV500
Specified value	$0.5 \pm 0.02V_{p-p}$

Note: VIDEO OUT terminal (CNJ701 on RJ-20 board) should be terminated with 75Ω .

Fig. 9-9 SYNC AGC adjustment

9-5-5. Y/C Separation Adjustment (VI-98 Board)

Mode	E-E
Signal	Color bar
Measurement point	Pin ② of IC001
Measuring instrument	Oscilloscope
Adjusting element	RV001
Specified value	Under $150m V_{p-p}$ (residual chroma component)

(Adjustment Method)

- 1) Adjust RV001 so as to minimize the residual chroma component.

Residual chroma component
(minimize amplitude of this section)

Fig. 9-10 Y/C separation adjustment

9-5-6. Burst Frag Adjustment (VI-98 Board)

Mode	Recording
Signal	Color bar
Measurement point	CH1: Pin ⑤ of IC001 (REC C RF OUT) CH2: Pin ⑧ of IC001 (BF OUT)
Measuring instrument	Oscilloscope
Adjusting element	RV002
Specified value	$a = b$ (Refer to Fig. 9-11.)

(Adjusting Method)

- 1) Use RV002 to match the falling edge of the CH2 burst pulse to the center of the CH1 burst signal.

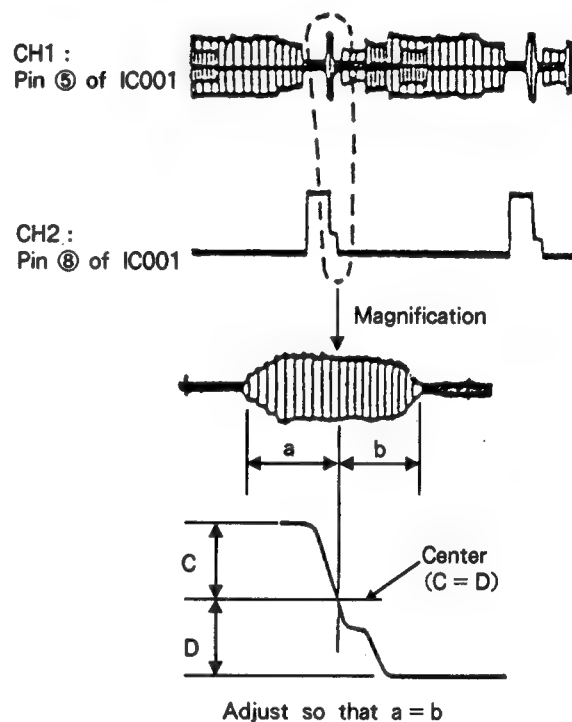

Fig. 9-11 Burst frag

9-5-7. Emphasis Input Adjustment (VI-98 Board)

Mode	E-E
Signal	Color bar
Measurement point	Pin ④ of IC001
Measuring instrument	Oscilloscope
Adjusting element	RV003
Specified value	$0.50 \pm 0.02V_{p-p}$

(Adjusting Method)

- 1) Adjust to $0.50 \pm 0.02V_{p-p}$ with RV003.

Fig. 9-12 Emphasis input level adjustment

9-5-8. PB CCD Input Level Adjustment (VI-98 Board)

Mode	Playback
Signal	Alignment tape for operation confirmation (WR5-3CSP) color bar section
Measurement point	Pin ④ of IC001
Measuring instrument	Oscilloscope
Adjusting element	RV006
Specified value	$0.50 \pm 0.02V_{p-p}$

(Adjusting Method)

- 1) Adjust to $0.50 \pm 0.02V_{p-p}$ with RV006.

Fig. 9-13 PB CCD input level adjustment

9-5-9. PB Y Level Adjustment (VI-98 Board)

Mode	Playback
Signal	Alignment tape: For operation confirmation (WR5-3CSP) Color bar section
Measurement point	Pin ③ of CN001
Measuring instrument	Oscilloscope
Adjusting element	RV007
Specified value	$1.00 \pm 0.05V_{p-p}$

Note: 1) The VIDEO OUT terminal (CN701 on the RJ-20 board) must be terminated in 75Ω.

(Adjusting Method)

- 1) Adjust to $1.00 \pm 0.05V_{p-p}$ with RV007.

Fig. 9-14 PB Y level adjustment

9-5-10. Y FM Carrier Frequency Adjustment (VI-98 Board)

Mode	E-E
Signal	Non-signal
Measurement point	Pin ④ of IC001
Measuring instrument	Frequency counter
Adjusting element	RV005
Specified value	$4.38 \pm 0.02MHz$

(Adjusting Method)

- 1) Adjust to $4.38 \pm 0.02MHz$ with RV005.
- 2) Perform "Deviation Adjustment" and "Emphasis Adjustment" after this adjustment.

Fig. 9-15 Y FM carrier frequency adjustment

9-5-11. Y FM Deviation Adjustment (VI-98 Board)

Mode	E-E
Signal	Color bar
Measurement point	Pin ③ of CN001: VIDEO OUT
Measuring instrument	Oscilloscope
Adjusting element	RV004
Specified value	Playback level: $1.00 \pm 0.05\text{Vp-p}$

- Note:** 1) "PB Y Level Adjustment" and "Y FM Carrier Frequency Adjustment" should have been completed.
 2) VIDEO OUT terminal (CNJ701 on RJ-20 board) should be terminated with 75Ω .
 3) EDIT switch (S013 on FR-60 board) should be turned OFF.

(Adjusting Method)

- Record color bar signal.
- Play back the recorded signal.
- Confirm the playback output level.
Specified value: $1.00 \pm 0.05\text{Vp-p}$.
- If the specified value is not satisfied, repeat steps 1) to 3) after turning RV004 as shown in the table below.

	RV004 turning direction
When larger than specified value	Clock wise (\curvearrowright)
When smaller than specified value	Counter clock wise (\curvearrowleft)

Fig. 9-16 Y FM deviation adjustment

9-5-12. AC Clip Check (VI-98 Board)

Mode	Recording
Signal	Color bar
Measurement point	Pin ③ of IC001
Measuring instrument	Oscilloscope
Specified value	$240 \pm 10\%$

(Adjusting Method)

- Confirm that the white (100%) peak of the waveform output from pin ③ of IC001 is $240 \pm 10\%$.

Fig. 9-17 AC clip check

9-5-13. Chroma Emphasis fo Adjustment (VI-98 Board)

Mode	E-E
Signal	Color bar
Measurement point	Pin ③ of IC001
Measuring instrument	Oscilloscope
Adjusting element	FL002
Specified value	Minimum fo component

(Adjusting Method)

- Adjust FL002 so that the amplitude of the flat section of the red portion become minimum.

Fig. 9-18 Chroma emphasis fo adjustment

9-5-14. REC Y Level Adjustment (VI-98 Board)

Mode	E-E
Signal	Non-signal
Measurement point	Pin ② of CN003
Measuring instrument	Oscilloscope
Adjusting element	RV200
Specified value	$0.31 \pm 0.01V_{p-p}$

9-5-15. REC C Level Adjustment (VI-98 Board)

Mode	E-E
Signal	Color bar
Measurement point	Pin ③ of CN003
Measuring instrument	Oscilloscope
Adjusting element	RV201
Specified value	$150 \pm 10mV_{p-p}$

Note: 1) Be sure to always perform REC AFM level confirm and REC ATF level confirm after performing REC C level adjustment.
2) Use MP-type tape.

Fig. 9-19 REC C level adjustment

9-5-16. Quasi Burst Phase Adjustment (VI-98 Board)

1. Method using vectorscope

Mode	Playback
Signal	Tape with recorded color bars
Measurement point	VIDEO OUT terminal
Measuring instrument	Vectorscope
Adjusting element	RV402
Specified value	Phase of color luminance points in quasi burst mode is same as phase of color luminance points in through burst mode

(Adjusting Method)

- 1) Make a record of the phase of the color luminance points (especially red). (Through burst mode)
- 2) Connect pin ② of IC400 and pin ① of IC400 with a diode (1SS119, etc.). (Quasi burst mode)

Fig. 9-20

- 3) Adjust RV402 so that the phase of the color luminance points is the same as the phase recorded in 1).
- 4) Remove the diode.

2. Method using monitor TV

Mode	Playback
Signal	Tape with recorded color bars
Measurement point	Confirmation on monitor
Measuring instrument	TV screen
Adjusting element	RV402
Specified value	Minimum chroma flickering

(Connection)

- 1) Connect pin ② of IC400 and pin ① of CN002 (RF SWP) using a diode (1SS119, etc.).

Fig. 9-21

(Adjusting Method)

- 1) Set the color level of the monitor TV to maximum.
- 2) Adjust RV402 for minimum chroma flickering.

9-5-17. Delay Burst Phase Adjustment (VI-98 Board)

Mode	Playback pause (LP mode)
Signal	Alignment tape for operation check (WR5-3CL), color bars
Measurement point	Confirmation on monitor
Measuring instrument	TV screen
Adjusting element	RV403
Specified value	Minimum chroma flickering

(Adjusting Method)

- 1) Set the color level of the monitor TV to maximum.
- 2) Rotate RV403 fully in the counterclockwise direction (↺).
- 3) Slowly rotate RV403 in the clockwise direction and stop at the position where there is minimum chroma flicker.

9-5-18. REC ATF Level Confirmation (CM-13 Board)

Mode	REC
Signal	Non-signal
Measurement point	Pin ⑧ of CN401
Measuring instrument	Oscilloscope
Specified value	$380 \pm 40\text{mVp-p}$

Note: Use MP type tape.

Fig. 9-22 REC ATF level Confirmation

9-6. SECAM-PAL CONVERSION SYSTEM ADJUSTMENT

- Make this adjustment aligning the PAL video system.
- For this adjustment, use the equipment listed below.

(Equipment Required)

- (1) PAL Colour Monitor TV
- (2) Oscilloscope, Dual-trace, Bandwidth ... more than 10MHz with delay mode
- (3) SECAM colour-bar generator
- (4) PAL vector scope
- (5) Frequency counter
- (6) Digital voltmeter

Setting up during adjustment

Video signals output by a pattern generator are used as adjustment signals when making the electrical adjustments, and these video output signals should be within the required standard. Connect all oscilloscope to CN701 (VIDEO IN) on the RJ-20 Board. Check that the amplitudes of video signal SYNC signals, picture portions, and line ID signals are flat at approximately 0.3, 0.7, and 0.3V, respectively. Fig. 9-23 shows video signals (Colour bars) used in making the electrical adjustment.

Fig. 9-23

9-6-1. f_H VCO Adjustment (VI-98 Board)

Mode	E-E
Signal	No signal
Measurement point	Pin ② of IC701
Measuring instrument	Frequency counter
Adjustment element	RV700
Specified value	15,625 ± 0.01kHz

(Connection)

Connect between pin ⑩ of IC701 and pin ⑨ of IC701 with a jumper wire.

(Adjustment Method)

- 1) Adjust with RV700 so that it becomes 15,625 ± 0.01kHz.

Fig. 9-24

9-6-2. I REF Adjustment (VI-98 Board)

Mode	E-E
Signal	SECAM colour-bar
Measurement point	Pin ② of IC701 Pin ① of CN001
Measuring instrument	Oscilloscope
Adjustment element	RV701
Specified value	tr = 4.5 ± 0.1μs

(Adjustment Method)

- 1) IC701 (⑩-⑨ OPEN)

Fig. 9-25

9-6-3. Bell Filter Adjustment (VI-98 Board)

Mode	E-E
Signal	SECAM colour-bar
Measurement point	Pin ② of IC701
Measuring instrument	Oscilloscope
Adjustment element	LV700
Specified value	The level variation of the chroma signal amplitude is 0 ± 10%

Note: When performing (Adjustment Method 1) be sure to use 1:1 probe as the signal level of IC701 pin ② is extremely small. In addition, when the adjustment is impossible because of the signal level is too small to read, perform (Adjustment Method 2).

(Adjustment Method 1)

- 1) Adjust LV700 until the waveform is flat.

Fig. 9-26

(Adjustment Method 2)

- 1) Set the picture level of the monitor TV to maximum.
- 2) Adjust by turning LV700 so that the borders of the respective colour-bars (especially red and blue) become vivid and stop LV700 at the position where the beat (red and magenta sections) becomes small.

9-6-4. Colour Level Adjustment (VI-98 Board)

Mode	E-E
Signal	SECAM colour-bar
Measurement point	Pin ③ of IC702
Measuring instrument	Oscilloscope
Adjustment element	RV702
Specified value	$0.75 \pm 0.05V_{p-p}$

Note: IC701 (⑩-⑪ SHORT)

Fig. 9-27

9-6-5. R-Y f₀ Adjustment (VI-98 Board)

Mode	E-E
Signal	SECAM colour-bar
Measurement point	Pin ② of IC702
Measuring instrument	Oscilloscope
Adjustment element	LV701
Specified value	Less than 0.05V

(Adjustment Method)

1) IC701 (⑩-⑪ SHORT)

Fig. 9-28

9-6-6. B-Y f₀ Adjustment (VI-98 Board)

Mode	E-E
Signal	SECAM colour-bar
Measurement point	Pin ③ of IC702
Measuring instrument	Oscilloscope
Adjustment element	LV702
Specified value	Less than 0.05V

(Adjustment Method)

1) IC701 (⑩-⑪ SHORT)

Fig. 9-29

9-7. ADJUSTMENT OF AUDIO SYSTEM

- Use the video signal input consisting of color bar signal for adjustment.

(Connection of Audio Measurement Devices)

Connect the following audio system measurement devices in addition to video system measurement instruments.

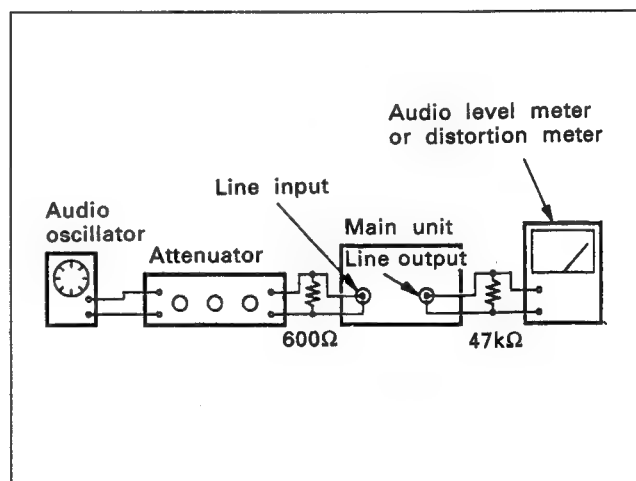

Fig. 9-30

(Adjustment Procedures)

1. PCM master clock oscillation frequency adjustment.
2. PCM playback VCO free oscillation frequency adjustment.
3. PCM playback level adjustment.
4. Line 1 E-E output level check.
5. Line 2 E-E output level check.
6. PCM offset adjustment.
7. PCM recording level adjustment.
8. Overall frequency characteristics check.
9. Overall distortion rate check.
10. Overall noise level check.

9-7-1. PCM Audio System Adjustment

Set switches and control knobs of VTR as follows for adjustment, unless otherwise required.

- Input select buttonLINE 1/2
- Sound monitor (PCM/Mix/Standard) switchPCM

Note: Adjustment element for channel R is shown in ().

1. PCM master clock oscillation frequency adjustment (PC-50 board)

Mode	Record
Signal	No signal
Measurement point	Pin ⑩, IC703
Instrument	Frequency counter
Adjustment element	CV701
Specified value	11.50 ± 0.05MHz

(Adjustment Methods)

- 1) Connect Pin ⑩ of IC703 to SW 5V.
- 2) Connect Pin ⑦ of IC703 to GND.
- 3) Short pins ⑤ and j of IC703.
- 4) Adjust CV701 for 11.50 ± 0.05MHz.
- 5) After completion of adjusting, open each connection of IC703.

2. PCM playback VCO free oscillation frequency adjustment (PC-50 board)

Mode	Playback
Signal	Free tape
Measurement point	Pin ⑧, IC708 (FMCK)
Instrument	Frequency counter
Adjustment element	RV707
Specified value	11.50 ± 0.05MHz

(Adjustment Methods)

- 1) Connect Pin ① of IC708 to +5V.
- 2) Set playback mode.
- 3) Adjust RV602 for 11.50 ± 0.05MHz.
- 4) Open the connection of Pin ① of IC708.

3. PCM playback level adjustment (PC-50 board)

Mode	Playback
Signal	For checking alignment tape operation (WR5-4CSP) 400Hz zone
Measurement point	Sound output L and R (Load resistance 47kΩ)
Instrument	Audio level meter
Adjustment element	RV705
Specified value	-7.5 ± 0.3dBs

(Adjustment Methods)

- 1) Adjust RV705 for -7.5 ± 0.3dBs.

Note: Where there is a level difference of 1.5dBs or more between channels L and R, adjust the level to the center value.

4. Line 1 E-E output level check

Mode	EE
Signal	400Hz, -7.5dBs: Line 1 input L (R)
Measurement point	Line 1 output L (R) (Terminated with 47kΩ)
Instrument	Audio level meter
Specified value	-7.5dBs ± 2dBs

(Check Methods)

- 1) Slide the recording volume knob and check that the level of Line 1 output L (R) becomes -7.5dBs around center click.

5. Line 2 E-E output level check

Mode	EE
Signal	400Hz, -7.5dBs: Line 2 input L (R)
Measurement point	Line 2 output L (R) (terminated with 47kΩ)
Instrument	Audio level meter
Specified value	-7.5dBs ± 2dBs

(Check Methods)

- 1) Slide the recording volume knob and check that the level of Line 2 output L (R) becomes -7.5dBs around center click.

6. PCM offset adjustment (PC-50 board)

Mode	Record
Signal	No signal
Measurement point	Pin ⑦ (CH2), Pin ⑧ (CH1), IC701
Instrument	Oscilloscope (CH2 Trigger)
Adjustment element	RV701 (RV702)
Specified value	Illuminances of upper and lower bright lines should be the same.

Note: Channels L and R affect each other, so alternately adjust each channel.

(Adjustment Methods)

- 1) Adjust RV701 (RV702) for the same illuminances of upper and lower bright lines.

Fig. 9-31

7. PCM recording level adjustment (PC-50 board)

Mode	Record
Signal	400Hz, -7.5dBs Sound input (L and R)
Measurement point	Sound output L (R)
Instrument	Audio level meter
Adjustment element	RV703
Specified value	-7.5 ± 0.5dBs

Note: "Adjustment of PCM Playback Level" should be already finished.

(Adjustment Methods)

- 1) Adjust the recording controls (for the left and right channels) until the line output is within $-7.5 \pm 0.5\text{dBs}$.
- 2) Record the signal, then play it back.
- 3) Adjust RV703 until the left-channel playback level is within $-7.5 \pm 0.5\text{dBs}$, then repeat recording.
- 4) Make sure that the right-channel output is within 1.5 dB with respect to the left-channel output.

8. Overall frequency characteristics check

Mode	Repeated self recording (LP mode)
Signal	Ⓐ 400Hz, -17.5dBs Ⓑ 20Hz, -17.5dBs Ⓒ 14kHz, -17.5dBs Line 1 input L (R)
Measurement point	Line 1 output L (R)
Instrument	Audio level meter
Specified values	Assuming 0dB of 400Hz Playback output level, 20Hz Playback output level is 0^{+2}_{-4}dB while 14kHz Playback level being 0^{+2}_{-5}dB .

(Check Methods)

- 1) Record signals Ⓐ ~ Ⓒ sequentially.
- 2) Playback recorded parts.
- 3) Check that, assuming 0dB of 400Hz playback output level, 20Hz and 14kHz playback output levels are 0^{+2}_{-5}dB and 0^{+2}_{-4}dB , respectively.

Fig. 9-32

9. Overall distortion rate check

Mode	Repeated self recording (LP mode)
Signal	1kHz, -7.5dBs: Line 1 input L (R)
Measurement point	Line 1 output L (R)
Instrument	Distortion meter
Specified value	0.7% or less

(Check Methods)

- 1) Record the signal.
- 2) Playback recorded part.
- 3) Distortion rate should be 0.7% or less.

10. Overall noise level check

Mode	Repeated self recording (LP mode)
Signal	No signal Insert the 600Ω shorting plug into both input L and R terminals of Line 1.
Measurement point	Line 1 output L (R)
Instrument	Noise meter
Specified value	64dB or above *

(Check Methods)

- 1) Record the signal.
 - 2) Playback recorded part.
 - 3) Difference between noise level and checked value of Line 1 E-E output level should be 64dB or more (IHF-A). *
- * With IHF-A listening compensation filter in use

9-7-2. AFM Audio System Adjustment

Set switches and control knobs, etc. of VTR to the following places during adjustment, unless otherwise required.

Input select switch.....LINE 1/2
Sound monitor (PCM/Mix/Standard)
Switch.....Standard

(Adjustment Procedures)

- 1) AFM carrier frequency adjustment (1.5MHz)
- 2) AFM carrier frequency adjustment (1.7MHz).
- 3) AFM deviation adjustment (1.5MHz).
- 4) E-E output level check.
- 5) AFM deviation adjustment (1.7MHz)
- 6) REC AFM matrix (L-R) adjustment.
- 7) PB AFM matrix (L-R) adjustment.
- 8) REC AFM matrix (L+R) adjustment.
- 9) PB AFM matrix (L+R) adjustment.
- 10) Overall level characteristics check.
- 11) Overall frequency characteristics check.
- 12) Overall distortion rate check.
- 13) Overall noise level check.

1. AFM carrier frequency adjustment (1.5MHz) (PC-50 board)

Mode	Record (SP mode)
Signal	No signal
Measurement point	Pin ③, IC901
Instrument	Frequency counter
Adjustment element	RV901
Specified value	1500 ± 3kHz

(Adjustment Methods)

- 1) Pull up Pin ③ of IC401 to +5V using 1kΩ.
- 2) Adjust RV901 for 1500 ± 3kHz.
- 3) After completion of adjusting, reset pull-up of IC401.

2. AFM carrier frequency adjustment (1.7MHz) (PC-50 board)

Mode	Record (SP mode)
Signal	No signal
Measurement point	Pin ③, IC801 (VCO OUT)
Instrument	Frequency counter
Adjustment element	RV801
Specified value	1700 ± 3kHz

(Adjustment Methods)

- 1) Pull up Pin ③ of IC401 to +5V using 1kΩ.
- 2) Adjust RV801 for 1700 ± 3kHz.
- 3) After completion of adjusting, reset pull-up of IC401.

3. AFM deviation adjustment (1.5MHz) (PC-50 board)

Mode	Record, stereo mode
Signal	Enter 400Hz -7.5dBs into the line input of RJ-20 board
Measurement point	Pin ③, IC901
Instrument	Oscilloscope
Adjustment element	RV902
Specified value	±60 ±0.5kHzp-p

(Adjustment Methods)

- 1) Adjust RV902 for the output level of ±60 ±0.5kHzp-p.

4. E-E output level check

Check items of channel R are shown in ().

Mode	EE
Signal	400Hz -7.5dBs: Sound input (both L and R channels)
Measurement point	Line output L (R) (terminated with 47kΩ)
Instrument	Audio level meter
Specified value	-7.5 ± 2dBs

(Check Methods)

- 1) Sound output L (R) level should be -7.5 ± 2dBs.

5. AFM deviation adjustment (1.7 MHz) (PC-50 board)

Mode	Playback
Signal	Alignment tape: WR5-9CS Operation checking (AFM Bilingual Tape)
Measurement point	Audio output L
Measuring instrument	Audio level meter
Adjustment element	RV802
Specified value	-7.5 ± 0.5dBs

(Adjustment Method)

- 1) Adjust to -7.5 ± 0.5dBs using RV802.

6. REC AFM matrix (L-R) adjustment (PC-50 board)

Mode	REC
Signal	400Hz, -7.5dBs L, R Common phase signal
Measurement point	Pin ⑥ IC801
Measuring instrument	Audio level meter
Adjustment element	RV953
Specified value	Less than -60dBs

7. PB AFM matrix (L-R) adjustment (PC-50 board)

Mode	Playback
Signal	Playback WR5-9CS the 400Hz, -7.5dBs L, R common phase signal
Measurement point	Pin ⑦ IC905
Measuring instrument	Audio level meter
Adjustment element	RV952
Specified value	Less than -35dBs

8. REC AFM matrix (L+R) adjustment (PC-50 board)

Mode	REC
Signal	400Hz, -7.5dBs L, R unti- phase signal
Measurement point	Pin ⑥ IC901
Measuring instrument	Audio level meter
Adjustment element	RV951
Specified value	Less than -60dBs

9. PB AFM matrix (L+R) adjustment (PC-50 board)

Mode	Playback
Signal	Playback WR5-9CS the 400Hz, -7.5dBs L, R unti- phase signal
Measurement point	Pin ① IC906
Measuring instrument	Audio level meter
Adjustment element	RV954
Specified value	Less than -35dBs

10. Overall level characteristics check

Mode	Repeated self recording (SP and LP modes)
Signal	400Hz, -7.5dBs: Sound input (both L and R channels)
Measurement point	Line 1 output L (R) (terminated with 47kΩ)
Instrument	Audio level meter
Specified value	-7.5 ± 3dBs

(Check Methods)

- 1) Record the signal.
- 2) Playback recorded part.
- 3) Sound output level should be -7.5 ± 3dBs.
- 4) Adjust RV902 and RV802 again if the output level is not within specified value.

11. Overall frequency characteristics check

Mode	Repeated self recording (LP mode)
Signal	Ⓐ 400Hz, -17.5dBs Ⓑ 30Hz, -17.5dBs Ⓒ 14kHz, -17.5dBs Sound output (both L and R channels)
Measurement point	Sound output L (R)
Instrument	Audio level meter
Specified value	Assuming 0dB of 400Hz playback output level, playback output levels of 30Hz and 14kHz should be 0 ± 3dB.

(Check Methods)

- 1) Record signals Ⓐ ~ Ⓒ sequential.
- 2) Playback recorded part.
- 3) Assuming 0dB of 400Hz playback output level, playback output levels of 30Hz and 14kHz should be 0 ± 3dB.

Fig. 9-33 Overall frequency characteristics check

12. Overall distortion rate check

Mode	Repeated self recording (LP mode)
Signal	1kHz, -7.5dBs: Line 1 input (both L and R channels)
Measurement point	Sound output L (R) (terminated with 47k Ω)
Instrument	Distortion meter
Specified value	1.0% or less (with distortion rate measuring filter in use)

(Check Methods)

- 1) Record the signal.
- 2) Playback recorded part.
- 3) Distortion rate should be 1.0% or less.

Fig. 9-34 Filter for measuring distortion rate

13. Overall noise level check

Mode	Repeated self recording (LP mode)
Signal	No signal Insert the 600 Ω shorting plug into both sound input L and R terminals.
Measurement point	Sound output L (R)
Instrument	Audio level meter
Specified value	-55dBs or less *

(Checking Methods)

- 1) Record the signal.
- 2) Playback recorded part.
- 3) Difference between noise level and checked overall level characteristics should be 55dB or above. *

* With IHF-A listening compensation filter in use

9-8. ADJUSTMENT OF TUNER SYSTEM

9-8-1. RF AGC Adjustment (IF001 Unit/TU-100 Board)

Signal	Broadcast TV signal
Adjustment element	VR of IF001 unit

(Adjustment Method)

- 1) Adjust the monitor TV to a maximum contrast.
- 2) Turn the VR to make snow noise visible.
- 3) Turn the VR in an opposite direction and set it to the point where the snow noise disappears.
- 4) Receive each channel and confirm that there are no beat picture corruption snow noises due to cross modulation.

Fig. 9-35

9-8-2. Receive Separation (MPX) Adjustment (TU-100 Board)

Signal	Stereo Lch: 400 Hz, 100% modulation (AERIAL IN of RF) Rch: No modulation
Connection point	Audio line output: L and R channels
Measurement equipment	Oscilloscope
Adjustment element	RV001

(Setting of The Switch)

RV101-L (FR-4 board)Center click
RV101-R (FR-4 board)Center click

(Adjustment Method)

- 1) Set the sound multiplex signal generator in the Stereo mode, and set only Lch to 400Hz, 100% modulation.
- 2) Connect the oscilloscope to the Rch of Audio Line Output.
- 3) Adjust RV001 to minimize Rch output.
When this is done, do not fully turn RV001.
(The "STEREO" indicator must be illuminated).

SUPPLEMENT-1

- Although the power block was supplied thus far in ASSY, it has now changed to disassembly services. Therefore, this board is detailed in the following.
Use this manual in conjunction with the SERVICE MANUAL of EV-S550B and EV-S550E.

This supplement includes only the following items.

1. 4-17 POWER SUPPLY BLOCK DIAGRAM
2. 5-2 HS-46SH PRINTED WIRING BOARD
HS-46SH SCHEMATIC DIAGRAMS
3. 7 HS-46SH ELECTRICAL PARTS LIST

4-17. POWER SUPPLY BLOCK DIAGRAM

SECTION 7
ELECTRICAL PARTS LIST

HS-46SH

NOTE:

The components identified by mark Δ or dotted line with mark Δ are critical for safety.
Replace only with part number specified.

Les composants identifiés par une marque Δ sont critiques pour la sécurité.
Ne les remplacer que par une pièce portant le numéro spécifié.

When indicating parts by reference number, please include the board name.

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- -XX, -X mean standardized parts, so they may have some difference from the original one.
- RESISTORS
All resistors are in ohms
METAL : Metal-film resistor
METAL OXIDE : Metal Oxide-film resistor
F : nonflammable
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- SEMICONDUCTORS
In each case, u: μ , for example :
uA...: μ A..., uPA...: μ PA...,
uPB...: μ PB..., uPC...: μ PC...,
uPD...: μ PD...
- CAPACITORS
MF: μ F, PF: μ μ F
- COILS
MMH: mH, uH: μ H

THIS NOTE IS COMMON FOR PRINTED WIRING BOARDS AND SCHEMATIC DIAGRAMS.

(In addition to this, the necessary note is printed in each block.)

For printed wiring boards:

- : Indicated a lead wire mounted on the component side.
- : Indicated a lead wire mounted on the conductor side.
- : Parts mounted on the conductor side.
- ▨ : Pattern from the side which enables seeing. * The inner two layers' patterns are not indicated.
- ▩ : Pattern of the rear side.*
- : Circled numbers refer to waveforms.*
- (B) or (F), etc. of capacitors indicate the temperature characteristics.

Caution:

- Pattern face side: Parts on the pattern face side seen from (Conductor side) the pattern face are indicated.
- Parts face side: Parts on the parts face side seen from the (Component side) parts face are indicated.

For schematic diagram:

- Caution when replacing chip parts. New parts must be attached after removal of chip. Be careful not to heat the minuts side of tantalum capacitor, because it is damaged by the heat.
- All resistors are in ohms, 1/4W (Chip resistors: 1/10W) unless otherwise noted. kΩ: 1000Ω, MΩ: 1000kΩ.
- All capacitors are in μF unless otherwise noted. pF: μF 50V or less are not indicated except for electrolytics and tantalums.
- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.
- ⊞ : nonflammable resistor.
- ⊞ : fusible resistor.
- : panel designation.
- △ : internal component.
- △ : adjustment for repair.*
- : B + Line.*
- : B - Line.*
- ⇒ : IN/OUT direction of (+, -) B LINE.*
- Circled numbers refer to waveforms.*
- Voltages are DC between measurement points and ground unless otherwise noted.*
- Readings are taken with a color-bar signal input.*
- Readings are taken with a digital multimeter (DC10MΩ).*
- Voltage variations may be noted due to normal production tolerances.*
- Circled numbers refer to waveforms.

* : indicated by the color red.

When indicating parts by reference number, please include the board name.

Note:

The components identified by mark △ or dotted line with mark △ are critical for safety. Replace only with part number specified.

Note:

Les composants identifiés par une marque △ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.
